

# Western Australian Government Case Studies in Cloud Transition

## Cloud Policy Fact Sheet 8.2

The following case studies of cloud deployments give examples of how cloud services are being consumed in the WA public sector. These case studies may assist you in planning your migration strategy.

### Objective

**Learn from the cloud deployments of other agencies through case studies.**

### Process

The Western Australia Government recognises that an adoption of cloud based services will return greater value to the public sector's ICT investment and improve service capability.

The government's shift towards ICT as a service will take advantage of the increasing commoditisation of ICT and the rapidly developing cloud computing industry. As agencies plan and commence their cloud transition they can learn from previous cloud deployments to refine, share and improve the process.

The following case studies document local examples of cloud adoption. They broadly address the:

- Drivers for adopting cloud;
- Opportunities; and
- Benefits and learnings.
