

Climate change in Western Australia - Issues paper

Submission Summary:

‘Frack Free Future’ campaign by Frack Free Future and Conservation Council of Western Australia

Contents

Page 1	Overview

Page 17–34	List of respondents who have modified pro forma content

Overview

A total of 1,416 submissions were received via email. The following template response was submitted by respondents:

If gas fracking proceeds here in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.

Gas is a polluting fossil fuel that releases greenhouse gas emissions at every stage of the industry, including extraction, processing and burning of gas for energy. However Western Australia has huge potential in clean renewable energy solutions and we do not need more gas.

A climate change policy for Western Australia must adopt and legislate science-based emissions reduction targets for our state that reflect international commitments under the Paris Agreement. Development of a gas fracking industry in WA is totally inconsistent with such a policy.

I want to see a climate change policy in WA that permanently rules out gas fracking and other fossil fuel developments and instead supports renewable energy solutions for our state.

Thank you for considering this submission.

Respondents

Modified responses

The table below lists respondents who have modified the content of the pro forma submission. All text is verbatim and therefore has not been corrected for spelling or grammar.

Respondent	Modified content
Andrew Talmage	Dear Leaders, Please think long term on these decisions. We can never go back and reverse damage only look forward and try and prevent it.
Anna Charlton	Dear Mr McGowan, I hope this email finds you well that and that you'll read and consider my arguments. I'm a 22 year old environmental scientist and as a student I feel obliged to tell you the impacts that fracking has. So please consider the environment and the future for currently the young people of this country has none.
Anna Sublet	In Victoria, the government has ruled out fracking. Can you do the same in WA?
Anne Bayley	Premier Let's keep WA free from pollution and lead the way for great of Australia. Fracking poisons the water tables irrefutably. Keep our pastoral lands and food bowl areas pristine for the next generation. Your children will thank you. WA DOES not need to be greedy to open up land to be ruined by cowboys who will never repatriate the land. The water poison cannot be reversed.
Annette Polec	Also if u want rain, it requires transpiration. Cant get trees to transpire if the water is on fire from poorly done fracking. And again stupid for our continued survival and harvest ability of this land. I'm not a hippy who is saying ban all fossil fuels now, I'm saying we can slowly move away from it. Start small and start now. Good start would be growing hemp for concrete in small builds. Meets the requirements in a small way and has the bonus of saving water while creating transpiration to assist rain creation.
B Pavey	You might also be aware that the Sverige Rijksbank recently divested from WA financial instruments because it viewed them as too risky, specifically because our state has a lousy track record on climate change and carbon risk.
Bonita Morgan	Ministers of the WA Government, Please consider the message below...
Brad Ronan	Please no gas fracking, stop for a minute and think of our children, we already take enough from the ground and our environment here in WA with our heavy resources sector. I don't believe the people of WA get our fair share of the profits from our current

	<p>resources. The whole of Australia benefits from our widespread resources while it's our environment and backyard that is being sacrificed. We are forgotten over here in WA when it comes to business and often have to wait for materials or goods to arrive from the Eastern States. We need to look after our, our children's and our children's children's future by caring for our land and environment. We have a beautiful state in many cases the envy of the world, let's use it to our advantage not ruin it.</p> <p>Lets show the rest of Australia and the world how resource rich WA with thought, clever thinking and effort can lead the way to achieving climate change for beautiful state and our future. We need to start, start now with us, let's make change.</p>
Brendon Cahill	<p>If gas fracking proceeds here in Western Australia, it will have a profound impact on already limited water supplies that are the nations future security.</p> <p>Fracking contaminates water supplies, and cant be effectively filtered for use in supporting life of people, livestock, or crops. Bypassing or corrupting clean environment laws to allow fracking is a criminal enterprise that even if not prosecuted now, will need to be addressed in future should fracking proceed and contaminate water supplies.</p> <p>There is no way that contamination of ground water can be prevented if fracking proceeds.</p> <p>All wells will leak as the contamination leaks up the sides of wells under methane pressure.</p> <p>All manner of toxins presently sequestered in the ground are released by fracking. Not to mention the hundreds of toxic chemicals that are injected into the ground in the fracking process used in Australia.</p> <p>Also Fracking releases huge quantities of Methane into the atmosphere that prevents ozone layer restoration from CFC damage. As Australia is affected more by holes in ozone layer this means that there could very well be a link to future increase in skin cancer from the excessive release of Methane by fracking gas fields.</p>
Bronwyn Evans	<p>I have seen the disaster this has caused overseas and we don't need polluted land waterways.. watertables.. etc.</p> <p>Stop this unwarranted GREED!!!</p> <p>Plenty of better options that don't destroy our land.. water and food supplies!!</p>
Carolyn Groves	<p>I read with horror the idea that "green tape" needs cutting to make more jobs! (West 27/12) What stupidity, not just because of the potential damage to the environment but also because it is a fallacy! Mines are being automated, driverless trucks, AI and managed from overseas with profits going overseas. I don't buy the idea that a political party can be bought by big business. You were voted in.</p>
Cate Wallace	<p>P.S. I do give a frack about fracking.</p>

Chantal Cordey	I simply say. NO fracking anytime, anywhere, this nonsense needs to STOP. We need to look after our water table. Now more the ever and start to take mother earth seriously and look after it and stop pillaging it.
Colleen Martin	Dont go back on voters wishes. It kills the parliament structure. Just like clearing koala habitat and now having an emergency and possibly extinction, fracking is going to leave the land and ecosystems in a vulnerable state. Pollution like fracking is unacceptable. This is a ridiculous show of greed. I for one am disconnecting from gas.
Croyden Aldrick	We do not want fracking here in Western Australia.
Dan Burt	Fracking has been banned in Great Britain for good reasons. It has to stop here. Keave fossil fuels in the ground and act on the Climate Emergency and Global Burning.
Daniel Forestier	Fracking is a temporary energy source, that risks poluting our most important resource "WATER" !!!! It is not worth perusing.
Daniel Osborne	I completely agree with the submission outlined below, I don't want fracking to be allowed anywhere in Australia. Please accept this submission and consider the long term potential implications for all of our future, not just the \$\$.
Denese Kelly	I want to see a climate change policy in WA supports renewable energy solutions for our state. A State where Laws Permanently rule out gas fracking and other fossil fuel developments Gas fracking poisons water tables. Aquafers are the base of our ecology. Plants, Animals and people need water to survive. There is NO question on it. What is required right now by all decision makers is to be wise, honest and choose the 100 year plan. No dollars for the next 5-10 years. Remember, Profit is driven with only the need for money. We have a unique dry land in Western Australia. Fracking will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution to say the least. Please lead the way, through wave power, wind power, solar power. There is an opportunity to create a world market in renewable energy. Dream and do energy creation at the source by renewables.
Deni Sevenoaks	Why, if you are a WestAustralian, would you want to destroy your environment for short term gain for the few? Why aren't you retrain your workers and community for a future we can live in, flourish in? Don't you read anything that comes across your desks? You will destroy soils and water sources. Can you not see the insanity in that?! Worldwide this is happening. Do you not care about your children and grandchildren and their future generations? Stop

	being driven by greed. You will have to pay for it eventually. Probably with your children's and grandchildren's disgust, at least.
Dennis Nickell	We do not need gas fracking, learn form the USA's mistakes.
Donna Chapman	It is Fracking crazy that we have to continue to fight to stop this horrendous practice. Fracking has been banned in many countries around the world for good reason, and if the only motivation is money, who are you selling out... the people. These people will not forget and when their families die from the effects of Fracking, they will want justice. Don't allow Fracking. It is short-sighted and dangerous.
Ellen Slater	Actually.. I am just against fracking at this moment in time.
Emily Romig	Fracking has been proven to poison the water table, in this time of drought and unprecedented fires, the government should be moving towards protecting our water sources instead of creating rivers that will burn as well as the bush around it.
Erica Spry	Dear Mc Gowan Government, On supporting your party, we know our future is a debatable issue, where by your party values people and country's health and it is in every ones interest that you plan accordingly to all our best interest. Please put healthy country & healthy people first always. I trust your government will stop any future planned fracking proposals in the Kimberley region. We rely on our healthy environment to sustain us into our future, especially our water resource and other natural & cultural resources.
Estelle Dollfus-Gates	I want to see a climate change policy in WA that permanently rules out gas fracking and other fossil fuel developments and instead supports renewable energy solutions. While I am a NSW resident any policy to increase fracking in Australia has an impact on our overall emissions as a country. The world is not on track to reduce emissions and any new fossil fuel infrastructure project that goes ahead locks up more emissions into the future. Now is the time for leadership on the climate front and allowing fracking with its pollution of water, its use of chemicals, its realease of emissions would be a step backwards.
Felicia Sandover	As a concerned citizen of West Australia that If gas fracking proceeds here in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.
Finn Pedersen	I am an architect with 29 years of experience in working in the Kimberly, Pilbara and Goldfields regions of WA as well as the PERTH metro area and the southwest. My concerns are based on this experience and the very real

	possibility of a climate disaster for australia if the government does not address climate change.
Gaille Abud	Although I now live in the east, I spent a significant part of my life in W.A. I have many memories of the Kimberley.
Gregory Annesley	<p>If you want to see what disastrous impacts fracking has had then take a look at what has happened in the eastern states in particular here in Queensland where whole areas of land have been destroyed and become completely unusable with contaminated soil and water.</p> <p>Apart from the environmental destruction that would be caused if gas fracking proceeds in Western Australia, it will have a profound impact on our climate and prevent the state from meeting international obligations to reduce carbon pollution.</p> <p>Gas is a polluting fossil fuel that releases greenhouse gas emissions at every stage of the industry, including extraction, processing and burning of gas for energy.</p> <p>However Western Australia has huge potential in clean renewable energy solutions.</p> <p>Development of a gas fracking industry in WA is totally inconsistent with such a policy as well as being completely unnecessary with the enormous capacity for renewable energy production from the abundant natural sources available in the state As well as this due to the rapid increase of the effects of climate change even within the last 2 years eg unprecedented severe drought across the entire country and the scarcity and security of water becoming a critical issue, the dangerous threat that this industry poses to such a precious commodity should mean that this industry should not be allowed to go ahead let alone even be given a consideration to go ahead.</p>
Gretchen Miller	<p>To whom it may concern.</p> <p>Frankly, fracking endangers both our food and water supplies. The damage cannot be undone. It's an act of insanity on a planet and a country already under great pressure.</p>
I Strew	Come on you know you can do better. Gas is not, in the final make up, less polluting than coal. Fracking destroys farming land, pollutes groundwater, makes people sick and pollutes the atmosphere. If gas fracking proceeds in Western Australia, it will have a profound impact on the climate and prevent the state from meeting international obligations to reduce carbon pollution.
Ian Hawkins	<p>Australia has huge potential in clean renewable energy solutions and we do not need more gas, the world doesn't need more fossil fuel, it needs far less & quickly.</p> <p>I want to see federal & state climate change policies that permanently rules out fossil fuel developments and support renewable energy solutions.</p>
Ian Kruger	Thank you for reading my letter.

Ingrid Martin	Time to plan for a future for our children not money for the big companies.
Jacqui Telford	<p>Your own financial advisors have advised it is not viable. 100% of all wells fail.</p> <p>The emissions given off are not correctly estimate and rouge or stay emissions can poison the air for miles.</p> <p>Fracking destroys the ground structure and can lead to sink holes.</p> <p>Far too much water is required for each well; if WA faces a drought we will need all our water. We already need all the water we have.</p> <p>Infrastructure is at our expense. The pitiful royalties we will receive are not nearly enough to cover costs.</p> <p>All gas mining companies pull out before clean up is completed because the areas cannot be completely cleaned..</p> <p>Much needed water bores are drained by fracking and replaced with gas, never to recover.</p> <p>Fifty scientists gave your their recommendation and you have not listened. This smacks of corruption, blackmail or just plain greed!</p>
James Hussey	p.s. I don't live in your terrible racist state, where you imprison indigenous people more than any other Aussie state. Where you often ignore people to make a profit, but I don't want fracking anywhere in my country, as it affects all of us. Do better. Surprise us all.
Jeannette Jordan	<p>If gas fracking proceeds here in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.</p> <p>Gas is a polluting fossil fuel that releases greenhouse gas emissions at every stage of the industry, including extraction, processing and burning of gas for energy. However, Western Australia has huge potential in clean renewable energy solutions and we do not need more gas.</p> <p>A climate change policy for Western Australia must adopt and legislate science-based emissions reduction targets for our state that reflect international commitments under the Paris Agreement. Development of a gas fracking industry in WA is totally inconsistent with such a policy. Thank you for considering this submission.</p>
Jennifer Mather	If the water supply in WA is affected that means the migration of people to an undamaged and good water supply area. If gas fracking proceeds in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.
Jenny McIntyre	I live in Victoria but I love the natural beauty of Western Australia and am a regular visitor. Fracking will destroy your treasure which is your beautiful environment. Please don't do it.
Jessica Miller	Gas is a polluting fossil fuel that releases greenhouse gas emissions at every stage of the industry, including extraction, processing and burning of gas for energy. Australian states need

	<p>to lead the way where the federal government refuses to do so. We do not have any time and cannot continue accepting this propaganda about Australia only being a small part of the pie. We are so wealthy and well educated as a nation.</p> <p>Western Australia has huge potential in clean renewable energy solutions and we do not need more gas. The community is crying out for governments to take charge and legislate in ways that protect us from the terrible impacts of climate change, impacts that are already being felt.</p>
Jill McMahon	<p>If gas fracking proceeds here in Dongara/Port Denison and the Midwest region in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.</p> <p>Gas is a polluting fossil fuel that releases greenhouse gas emissions at every stage of the industry, including extraction, processing and burning of gas for energy, as well as using enormous amounts of precious water, a rapidly diminishing resource in a heating, drying Australian climate. It's worth noting that Australia does NOT count the emissions produced from exported gas sold and shipped overseas which is an enormous amount of greenhouse gas emissions when used.</p> <p>Western Australia has huge potential in clean renewable energy solutions and we do not need more gas, particularly from fracking which is NOT an old science; it has too higher risks in a water scare country and world, and Australian does NOT need to be fracking for overseas shareholder benefit.</p> <p>Oil and gas and the FIFO industry destroy small communities, not create prosperity. The reason we live in a small community is for the natural beauty, lack of air/road traffic, clean air, unlocked cars & houses and assurance our children are safe to walk/ride about the town knowing they are known to our townspeople as they move between visitors/strangers. We don't need the stress of pollutants in the air, noise and light pollution, industry waste stockpiled in our sanddunes and illegally dumped in our town's tips and outlying skip points. We don't need the risk of our groundwater being affected so that our local agricultural and organic growers are under threat, and neighbours sell up to the pressure of the fracking salespeople. Community members trying to care for their health, land and local environment don't want the fight with our local Town Council should they not advocate for us, and don't need this stress and added burden to our busy lives.</p> <p>I do believe this state government must lead the way and show the rest of the country and the liberal voters that it can be done, and we can be proud of our state Premier.</p>
Jill Tucker	<p>We do not need to fracking gas here in WA... Let's look further into green solutions. Do not take the easy alternative which is driven by corporations who's major interest is profit. Let's be the state that takes control and takes on geen alternative and makes it</p>

	work. It can be done cost effectively and will benefit our world immensely.
Jo Daniels	We are in the midst of an emerging climate crisis. Fracking means increased greenhouse gas emissions from extraction and utilisation. Our scarce water supply is too precious to gamble. Please don't frack our environment - why can't WA lead the rest of Australia in renewable energy instead. We have limitless sunshine, wind, waves, hydro - we don't need the risk of fracking.
Joan Day	It's a Black period for WA. BANGLADESH has just announced a planetary climate emergency and is calling on all other countries to do the same. Other countries will not need fossil fuels either as they transition to Renewables. Agriculture can be severely affected by fracking. What about our food security?
John Sholl	Fracking is an industry that irreverently pollutes our water, destroying the environment and our Ecosystems. There is no way to reduce the environmental impact of fracking. At the last elections Labor promised to ban fracking over most of our state. Fracking will leave a legacy of pollution and destruction for generations to come.
John Brooker	Fracked gas is mostly Methane and burning methane causes more global heating, than burning coal If I have to switch to supporting the Greens instead of Labor, I will!
John Hill	We MUST get away from non renewable energy sources for the sake of the planet.
John Macinnes	I don't live in WA but have lived and visited there extensively from 1966 onwards. The following comments are not only applicable to WA, having universal relevance.
Jonathan Price	Dear Minister Canavan. I want to strongly support the case against fracking in the Kimberly. There's much good advice in this letter promoted by the CCWA. In fact this is an opportunity for your administration to correct the disastrous course pursued so far by Australia's governments encouraging the total destruction of the world's future and at the same time threatening the Kimberley's environment that is so unique.
Judi Hurlle	Um, fracking was banned for a reason!! None of it's toxicity or the damages it causes to the environment and the atmosphere have changed. If gas fracking proceeds in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution. It will be an unforgivable mistake!
Kathryn Woods	Also protection of Aboriginal custodianship of land & water rights. As a Victorian who lived in WA, I value WA's unique environments & want to see them protected.

Ken Wylie	I am fully opposed to any form of fracking in WA. The risk of groundwater contamination is too great. Also gas still has a negative effect so far as climate change is concerned. I urge the government to adopt a climate change policy in WA that permanently rules out gas fracking and other fossil fuel developments and instead supports renewable energy solutions. Gas fracking should not proceed in Western Australia as it would have a profound impact on our climate and prevent WA from meeting its international obligations to reduce carbon pollution. I am in favour of a climate change policy in WA that permanently rules out gas fracking and other fossil fuel developments and instead supports renewable energy solutions for our state.
Kerry Llewellyn	It also degrades the landscape and adversely impacts native flora and fauna massively.
Kerry Wilsmore	Dear Mr. McGowan, I have been a long time supporter of the Labor Party and recognise the need for action on climate change. I visit your state every two years for up to six weeks at a time. The southern part, most biodiverse in Australia and love Kimberley and Pilbara. I note that Tasmania is forging ahead due to its natural beauty. Don't stuff up the last frontier with fracking.
Kitka Hiltula	Please consider our future, and the future of the environment, over the short term economic gain.
Lee-Anne Miles	Thank you for considering this submission and the future of tourism in this state. Thank you, also, for considering the damage emissions are doing to both the environment and priceless, irreplaceable rock art in other areas of the state. If you take into account all that is already being extracted, in this state, you will see there is no need for any further gas extraction. Especially NOT fracking.
Leonie Walton	With all our renewable options available, it would be a disaster to continue wrecking our environment unnecessarily. When are we going to just STOP? Try and be remembered for doing something good.
Lesley Thomas	If gas fracking proceeds here in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution, not to mention the potential impact it will have on our precious water supply.
Linda Ashton	Climate change is a global issue. We have and share one biosphere. It is the life sustaining thin layer with ecosystems and structures. It is an equivalent thickness to the skin of an apple. Wherever further destructive activity is planned, it must be challenged.
Linda Taylor	I am proud to be a Victorian as our government shut the gate on fracking. Why would anyone want gas companies to come onto their land and pump chemicals into the water tables below. Harm caused is variable and unpredictable.

Lisa Lane-Collins	We NEED to find another way to meet our energy wants. I do not support the cost benefit ratio of fracking and have cancelled my gas supply with origin on account of their choice to support it.
Lyn Mews	I am appalled at the disregard toward the untold damage which is and will be caused to the Earth by this industry. We MUST change policies as life will be destroyed this century. Thus won't affect us in the now but will impact our future generations dramatically.
Lyn Osborne	<p>I am very sad that despite the dangers inherent in fracking, the addition to our climate changing CO2 output, that we haven't at the least put a ten year moratorium on this practice. I'd prefer it to be permanently ruled out.</p> <p>It's not good enough to say we THINK it will be fine. There are too many examples all over the world, and within Australia, to demonstrate otherwise.</p> <p>Please prevent gas fracking here in Western Australia, It will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.</p>
Lyn Worcester	I want to see a climate change policy in WA that permanently rules out gas fracking and other fossil fuel developments and instead supports renewable energy solutions. This affects not just WA, but all of Australia, and indeed, the world!
Lynette Sunderland	<p>I want unconventional fracking to cease in Australia and in Western Australia in particular.</p> <p>There is enough evidence that unconventional fracking will pollute our water, air and land. The dangers of such an industry is evident globally.</p> <p>The bottom line of such an industry should not be money for both Federal and State Coffers, but the health of our land, flora and fauna, and the people who live in this great continent.</p> <p>I would hope that unconventional fracking will cease immediately. That this Labor Govt, under your leadership, historically be known as the one which led the way to do this and not be known as the one which destroyed the future of our state.</p> <p>While you are reviewing policies, I would urge you to look into ceasing putting the dangerous chemical FLUORIDE into our water. There is also enough data to show that this chemical is poisoning all those humans and animals who are in contact with it.</p>
Marcelle George	<p>Dear Premier and Cabinet</p> <p>we don't have leeway for any future carbon-based emissions. Please invest wisely on my behalf, i.e. in new technologies that will not further hasten the global warming we're already experiencing (or threaten our very precious water).</p>
Maree Murfet	I have researched gas extracted by fracking and it concerns me. I think there are too many possibilities of damage to the aquifers and ground water supply. Western Australia has huge potential in clean renewable energy solutions. Much of the gas is sold to overseas countries and it's risking our future for the economy. A climate change policy for Western Australia must adopt and legislate science-based emissions reduction targets for our state.

	that reflect international commitments under the Paris Agreement. I want to see a policy in WA that permanently rules out gas fracking. WA is such a beautiful stateI spent 18 months there and will be back. The ground water needs to be protected everywhere
Margie Crowther	Enough is enough. We have damaged more than enough of our natural resources. They are not there just for us. Stop making decisions like that is all that counts - making money and human existence. Humans can think through other options... and this is what needs to happen. Not more Fracking in Western Australia or anywhere.
Marianne Neave	I have serious concerns especially as a number of international peer reviewed papers have been published linking fracking and an increase in methane emissions. I would request that you seriously consider halting any fracking operations until there has been more thorough research on this matter in particular. Methane levels are now double what they were in the preindustrial period, and the impact of methane emissions on our atmosphere in the short term is far greater than that of CO2. A rapid rise in methane levels is highly likely to trigger runaway global warming, making much of the planet uninhabitable for humans well before the turn of the century. Western Australia has huge potential in clean renewable energy solutions and we do not need to go down the path of exacerbating climate change.
Marie Flood	Please look at the research showing how bad fracking for shale gas is for our chances of having a clean and safe future. It risks underground water supplies, and there is no alternative to water. Once water sources are damaged they can't be fixed. Proponents of unconventional gas cannot prove that won't damage water and environment - it's time to stick to the precautionary principle.
Marilyn Hoey	I do understand that you see gas fracking as a good thing for WA but respectfully you are very wrong. WE ARE AT A TIPPING POINT and if gas fracking happens in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.
Matt Smith	Please do not give into Green hysteria. Fracking has been carried out safely for decades and should continue into the future, ensuring the financial security of this great state.
Melanie Leigh	Coal and gas are energy sources of the past. Renewable sources of energy on the other hand, are for the future. We want our children and grandchildren to HAVE a future
Meredith Reardon	Gas fracking -if it proceeds in Western Australia, it will have a profound impact on the climate and prevent the state from meeting international obligations to reduce carbon pollution.
Merisha Ansell	Please please please do something to make a difference and preserve what's left of our natural environment!
Mwrgaret Hogg	A climate change policy for Western Australia and Australia as a whole must adopt and legislate science-based emissions reduction

	targets for our state that reflect international commitments under the Paris Agreement. Development of a gas fracking industry in WA is totally inconsistent with such a policy and Obligations. Grow WA into a Brighter and Sustainable Future.
Nancy Kennedy	Climate change is not inevitable. We don't have to let it happen. Start fixing our mistakes.
Nigel Wallace	Allowing teaching for gas has to be one of the most short sighted things a government could ever do. It us environmental vandalism on a massive scale. The only people that make money from this are the companies and their workers. It is not cost effective which means the royalties will be nonexistent but the permanent damage will remain for future generations.
Noritta Morseu-Diop	Fracking is dangerous for the environment and for humans and animals. STOP FRACKING NOW
Oliver Arthur-Andrews	I want to see a climate change policy in WA that permanently rules out gas fracking and other fossil fuel developments (no new developments) and instead supports renewable energy solutions for our state.
Pauline Harris	This is a totally destructive way to obtain energy. This would be a huge environmental crime.
Peter Anderson	Fracking is a world wide reality, Australia deserves the same opportunities ...no-one will give this nation 'free stuff' to support it's Economy problem with 'fracking' and no 'climate change'. CO2 cannot alter temperature trends, it has never been shown capable and the 'greenhouse' hypothesis remains unvalidated by experimentation after several decades of effort. The inconclusive results show only that CO2 and the 'greenhouse' hypothesis cannot alter temperature trends. The effort to infer (of inference temperature rises as does CO2 thus a 'link' exists of some sort?) a supposed relationship between CO2 and temperature is all the 'climate cult' huddles around. 'Climate change', the phrase itself, is naught more than a sly and deceitful allusion to a supposed, but unobserved, anthropogenic process based on nonsense claims about CO2. There is no 'climate emergency', CO2 is not 'carbon' nor is it a 'particle' of 'carbon' nor is there a 'carbon equivalence' for the CO2 molecule. In short the CO2 MOLECULE is not a simile in any valid manner for Particulate Carbon. There is no 'climate emergency' nor will there be one ...time to step back from the hype for Science is not able to support the hysterical attitudes observed of the 'green' minorities regardless of how loud they become.
Peter Atherton	Climate Change Scientists have been telling us for decades that the continued burning of fossil fuels will lead to unprecedented disasters including droughts, bushfires, warming and acidification of oceans and bleaching of coral reefs! It is all happening at faster rates than predicted as you are well aware.

	<p>To tackle Climate Change Australian Governments must ban all new fossil fuel projects and stop subsidies to the fossil fuel industry. Australia has the Planets biggest solar hot spot, much of it in WA, which has enough solar energy to provide all the Worlds energy needs.</p> <p>Please forget fossil fuels which have become disastrous for our Planet and urgently adopt Prof Garnauts vision for Australia to become a World Superpower with solar energy!</p>
Peter Chandler	<p>Science tells us burning fossils fuels is the major contributor to climate change.</p> <p>Unfortunately no Australian Government has had the backbone to stand up to the fossil fuel industry.They are prepared to let the climate get hotter and drier,for royalties and income at the expense of their citizens.</p> <p>Why don't you do something courageous for current and future generations by halting all fossil fuel exploration and extraction. The Libs won't do it,nows your chance.</p>
Peter Llewellyn	<p>There are multiple other negative consequences from the totally unnecessary fracking industry, including likely pollution of groundwater, adverse effects on wildlife and habitat</p>
Philip Millstead	<p>I voted for a state government that would listen to not only West. Australians but the global community who do not accept fracking in ANY shape or form. If this form of "mining" cannot be guaranteed 100% safe, and we know that to be the case (abyssmal short and long term consequences), what form of stupid justifies poisoning our aquifers and creating carnage?</p> <p>To be a true leader, one should be listening to the people who are voicing their opinions and reasons, and acting appropriately and conscienciously on that.</p> <p>I personally feel highly offended that I should have to broach this subject and appeal to the government to ban any and all forms of fracking. Enough damage has already been done; not just in W.A. or Australia but globally.</p> <p>To know the inherent risks and still go ahead ... fracking is unacceptable.</p>
Rachel Matthews	<p>If you have persuaded that it will not add to climate change, just judge it on how it affects the country where it is harvested. That country can never be rehabilitated.</p>
Rachel Prudham	<p>I feel you lied to us. I voted for you believing you had our best interests at heart when it came to fracking. It's dirty, it's dangerous - Australians by far do not want it.</p>
Raven East	<p>If gas fracking proceeds in Western Australia, or anywhere in this country further than it already has, it will have an irreversible, profound impact on fresh water. Most people drink water! All animals drink water. Water is a key Element.</p> <p>This is the driest continent on Earth. For what purpose would any government decide to purposely enable an industry that intentionally poisons the fresh water of this land?</p> <p>Money & economic stability may be important but life is more</p>

	<p>important. Water is Life.</p> <p>Gas is a polluting fossil fuel that releases greenhouse gas emissions at EVERY stage of the industry. Greenhouse gas is released by extraction, processing, transportation and the burning of gas. Western Australia has huge potential in clean renewable energy solutions and this is a much more financially viable energy source. Look to South Australia to see how it works. Good job SA! Development of a gas fracking industry in WA is totally inconsistent with reduction targets required globally to protect life on the planet. ... For what purpose would WA develop such a policy?</p> <p>It is time for change. It is time for a climate change policy in every state of Australia, including WA, that permanently rules out gas fracking and other fossil fuel developments. The support of renewable energy solutions is vital for the wellbeing of the whole of Australia. I live in NSW. I have close relatives in WA visit WA often. I don't see the borders as I consider the whole continent my home. I live in Australia. I love this country.</p> <p>I ask you to consider the question 'For what purpose would WA enable the poisoning of fresh water through the Fracking Industry?'</p>
Rebecca Armstrong	<p>To whom it may concern,</p> <p>As a parent of 3 young children the ongoing environmental damage that is happening in my country is deeply concerning and upsetting. Everyone said in the Marriage Equality debate 'think of the children'. Apparently having two people marry is far more disturbing than the destruction and poisoning that fracking imparts. Please; think of my children, and the millions of others that will suffer as a result of this process.</p>
Roseleen Healy	<p>Fracking anywhere in Australia is not the answer.</p>
Rosemary Blemings	<p>Decades ago we lived in MEEKATHARRA amongst the excitement of WA and the early mining boom. NOW IS THE TIME TO MOVE AWAY FROM FOSSIL FUELS AND SHOW THE LAGGARD federal government that WA HAS COMMON SENSE AND A PROUD SENSE OF THE RENEWABLE FUTURE. ALLOWING FRACKING IN WA is SUICIDAL FOR PEOPLE AND THE PLANET. WA IS BETTER THAN THAT</p>
Ross Foster	<p>Mr McGowen If Fracking goes ahead it will endanger the one thing W.A. needs the most !! Our Ground water .</p>
Sandra Moroney	<p>Gas fracking in Western Australia, will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.</p> <p>Western Australia has a huge opportunity for clean renewable energy solutions and we do not need more gas.</p> <p>I want to see a climate change policy in WA that permanently supports renewable energy solutions for our state. No fracking is needed.</p> <p>Further decimating of the land is unthinkable and once ruined does</p>

	not return to its normal state. Please think long and hard about your decision and ban fracking for good - lateral thinking and you could come up with better solutions than fracking . Thank you for considering this submission.
Sarah Brennan	<p>Dear Premier McGowan,</p> <p>I under that your government recently announced that vast areas of WA will be re-opened to the polluting fracking industry. Don't do this! It will have a profound impact on climate (and by the by prevent the state from meeting international obligations to reduce carbon pollution).</p> <p>There is no rational argument for such a decision. Gas extraction releases greenhouse gas emissions at every stage of the industry. On the other hand, Western Australia has huge potential in clean renewable energy solutions.</p> <p>You have the opportunity to set policy in WA that permanently rules out gas fracking and other fossil fuel developments and instead supports renewable energy. Looking back on your life in 20 years time you might feel considerable satisfaction at having chosen the responsible i.e. renewable path. The alternative is profound guilt and regret. I know which one I'd choose.</p>
Sharon Bonser	I recently heard of proposed fracking operations lined up to be around the yarragedee aquifer, as most locals to the south west know that is is a great underground water source that keeps most of this area flourishing in soils, water sources, ecosystems the list is vast. Start fracking and u loose a very sustainable aquifer that would continue to support the region in years to come, as it has done for over 100's of years.
Sharon Woods	<p>Our country is burning, our animals ae dying, our water table is shrinking, we do not have enough water. We need clean food. We need to move to carbon free fuel sources.</p> <p>Our planet is warming.</p> <p>We all know these things. Adding more fossils is a train wreck. Our young people are angry. I'm angry.</p>
Shaun Banner	It is simply wrong that short term profits for private pockets would be traded for our states citizens health, our future climate, contamination of our most important resource our artesian ground water and our ecology when a sustainable energy future is viable through existing profitable renewable technology. Coal seam gas is a redundant and destructive technology that simply should not be allowed by you.
Shaun Clark	The statistics show that exploiting the Canning Basin's unconventional oil and gas would create more than double the whole of Australia's permissible CO2 budget under the Paris agreement. This must stop. You must ban fracking throughout Western Australia immediately. This is insanity. There is no excuses anymore. Ban fracking now.
Shirley Knight	I want to see a climate change policy in WA that permanently rules out gas fracking and other fossil fuel developments and instead supports renewable energy solutions for our state, after all, if this

	<p>was in your back yard like it is in ours, how would you feel, come and see this beautiful country here in Dongara and the Kimberly's and watch it all get ruined...our food bowl, our lifes work!!! Please, stop the fracking from starting, don't allow it, get another moratorium happening and ban it everywhere, completely,....we need our water.</p>
Sigrid M Mcgarva	<p>I want to see a climate change policy in WA, as in all other states within Australia, that permanently rules out gas fracking and other fossil fuel developments and instead supports renewable energy solutions for all states in this unique country called Australia</p>
Susanna Harrison	<p>As a regular visitor to WA, please reconsider your stance on fracking.</p> <p>The UK government has recently announced an end to fracking following a new scientific study which deemed it impossible to exclude "unacceptable" consequences for anybody living near a fracking site.</p> <p>The report stated there was no way of predicting the magnitude of earthquakes which could be triggered. This came in the wake of multiple earth tremors.</p> <p>Australia consistently disregards international efforts to reduce harmful emissions which effect climate change, yet has the capacity to develop renewable energy solutions - why?</p>
Talia Ward	<p>It's absolutely insane to pursue!</p>
Tes Di Chiera	<p>I voted for labor in WA and did so believing Mark McGowan would stand by his word of stopping fracking here. Please keep some integrity as our faith in politicians is at an all time low.</p>
Toby Sterling	<p>On another level Fracking is a highly toxic extractive process, putting groundwater at serious risk, is banned in many European Countries, and there are many documented cases of chronic illness for residents who live near these wells.</p>
Trevor Vivian	<p>When full scale gas fracking proceeds here in Western Australia it will have a profound negative impact over country, population and on our climate.</p> <p>This will result in preventing WA and Australia from meeting their international obligations to reduce carbon pollution.</p> <p>Fracked Gas is a polluting fossil fuel that releases greenhouse gas emissions at every stage of production, including extraction, processing and burning of gas for energy.</p> <p>However Western Australia has huge potential in clean renewable energy solutions and we do not need more polluting gas.</p> <p>A climate change policy for Western Australia must adopt and legislate science-based emissions reduction targets for our state that reflect international commitments under the Paris Agreement.</p> <p>Developing a gas fracking industry in WA is totally inconsistent with such a policy.</p>
Trish Mcphee	<p>Why would we poison water forever in exchange for gas that can be burnt just once? Why would we make it hard for farmers to grow food, which we cannot do without, for the sake of energy</p>

	<p>which has so many alternatives? It just doesn't make any sense, except if decision-makers are in cahoots with gas companies for the sake of short-term profits.</p>
<p>Tyler Indersmith</p>	<p>I'm 26 years old, I live in Geraldton WA. I used to think there was a future for us, for Geraldton, for Australia, for the human race. We have learnt so much, It's truly mind blowing!</p> <p>So when the method that's made our entire way of life possible is then ignored during the most turbulent times ever face by Humans because of money? You've lost me.</p> <p>This is an appeal to the human in you, what ever is left after we remove the drive for money, it's scary I know but I beg of you Don't destroy our future, don't destroy the future for our kids</p>
<p>Valerie Le Bihan</p>	<p>PLEASE PROTECT WHAT IS LEFT OF THE AUSTRALIAN ENVIRONMENT AND DO NOT ALLOW FRACKING IN WESTERN AUSTRALIA.</p>
<p>Veronica Reid</p>	<p>I am very, very disturbed that the Government I voted for has considered allowing fracking in WA.</p> <p>Surely you have investigated the disastrous results in communities in other countries, e.g. Canada and USA! For now, unpolluted water above & below ground, soil & clean air are our MOST precious resources.</p> <p>Wake up. We have abundant wave water, wind and sunshine. The PEOPLE are investing in these, NOT fossil fuels to further contribute to a warming climate. Its hot enough already!</p> <p>If gas fracking proceeds here in Western Australia, it will have a profound impact on our climate and prevent our state from meeting international obligations to reduce carbon pollution.</p>
<p>Volkmar Franziskus</p>	<p>If gas fracking proceeds in Western Australia, it will have not just a profound impact on our climate preventing our state from meeting international obligations to reduce carbon pollution it is a health hazard effecting the water systems, introduces more poisonous chemicals into the environment, destabilises the earth crust.</p>
<p>William Mcintosh</p>	<p>Dear Mark McGowen, my Premier of WA, and your colleagues, some who I have met and respected from day one. Please work out another road to achieve economic prosperity for WA. Yes we need money. Yes we need the environment intact.</p> <p>Please spend more time in the science room and less time on FOX news.</p> <p>Please reject Fracking of our water table until it is proven safe. That is not the case yet.</p> <p>and Please don't put the economy before human rights, thats not the Australia I want for my children, your children.</p> <p>Please lead with inspiring motivational robust-with-shoulders back pride in our great state.</p> <p>Please don't frack our country.</p>
<p>Wolfgang Devine</p>	<p>If we would consider the environmental costs this industry would be unaffordable. People who create industries with costs for future</p>

	generations, or those who support it, will be judged and jailed under new laws that people would make.
