Subject: Ability for Western Power to deploy SPS - consultation

Hello

Thank you for the opportunity to provide feedback on the proposed amendments to the regulations as set out in the *Electricity Corporations (Electricity Generation and Retail Corporation Area of Operation) Amendment Regulations 2020*.

We have reviewed the changes and have no further comment on the proposed amendments.

We look forward to more information on how stand alone power systems will operate in the market, including: how energy produced by the SPS will be billed; how a customer will be disconnected for non-payment; whether those customers connected to a SPS will be treated as contestable; and, the broader impacts of SPS as they increase in number on the capacity and generation markets moving forward. We also look forward to greater clarity as to how SPS will be treated under the next Access Arrangement, including whether there will be a specific distribution reference service, and how the cost allocation for SPS will be treated. Any further information would be appreciated.

Kind regards, Sarah
