Executive Summary

This report summarises the findings of the Australian Litter Measure litter surveys completed across the Perth Metropolitan Area in May 2022.

Across 104,726 square metres surveyed, a total of 18,245 items of litter were counted, with a calculated volume of 1,145.65 litres.

Cigarette Butts were found to be most common item by count, while *Paper and Card Food Packaging* was the highest category by volume. Industrial and Main Road sites contained the highest levels of litter observed, whilst Beaches had the lowest.

Litter data has been provided by site types and key categories to establish a basis for trend analysis under this newly developed litter count method.

About Perth NRM

Perth NRM is a not-for-profit organisation, in the natural resources management (NRM) sector.

Perth NRM has successfully partnered with industry groups, local, state and federal government departments, educational institutions, and landcare groups to promote long-term outcomes in water quality, biodiversity enhancement, healthy coastal environments, cultural heritage preservation and sustainable agricultural practices.

Through collaborative natural resource management initiatives, we contribute to the social, economic, and environmental well-being of the Perth region.

Our purpose: Empowering people to positive ecological impact.

Our vision: We live in thriving natural ecosystems with sustainable food production.

1. Project Summary

Perth NRM have been engaged by Keep Australia Beautiful Council (“KABC”) to complete a series of litter audits utilising the Australian Litter Measure (“AusLM”) method and produce a report on the findings. This is a newly developed litter count method, which aims to provide a methodology to capture standardised litter data across all states of Australia. The findings of the surveys have been summarised in the attached report, with a focus on highlighting key litter items, trends in litter volumes at the defined site types, and identifying key drivers and impacts on litter volumes overall.

Scope

A total of 57 sites within the Perth Metropolitan area were surveyed, during a two-week period in May 2022. The sites were spread across ten local government areas. The AusLM method classifies sites into six different categories, and in most cases, one of each site type was surveyed in each local government area.

Site type	Description
Beach	A mostly sandy beach frequently visited by people for activities such as swimming, walking, other recreation and relaxation.
Residential area	A street/collection of streets in a residential area. The street has homes, units, or apartments on both sides of the street.
Industrial area	A street/collection of streets in an industrial area.
Retail area	A street/collection of streets within a retail precinct (i.e., shopfronts).
Recreational park	A public outdoor park mostly covered by grass and frequently visited by individuals and families for recreation and leisure activities.
Main roads	Straight open stretches of sealed road with wide verges. Roads that typically act as an arterial for traffic between and around population centres.

The total number of sites, and transects surveyed within each site is summarised below. Local government names have been anonymised.

Locations	Number of sites	Transects
LG_01	6	28
LG_02	5*	23
LG_03	6	28
LG_04	6	28
LG_05	5*	23
LG_06	6	28
LG_07	6	28
LG_08	6	28
LG_09	5*	23
LG_10	6	28
Total	57	265

** Three local government areas did not include a Beach or suitable alternative site (river or coastal) within their boundary, hence those locations only included five sites.*

This is the first full set of litter surveys completed using the AusLM method in Western Australia.

This initial round of surveys established baseline data for the AusLM methodology in the Perth area, as well as identified key items and indicators, enabling comparisons and trends to be tracked when future surveys under this method are undertaken. The data obtained from these surveys will also be used by KABC to track the efficacy of its programs.

Survey Methodology

The 57 sites to be surveyed were selected by KABC with reference to the AusLM Site Type assessment criteria (attached at Appendix 1). Surveyors were provided theory and field training in the AusLM method, prior to commencing the surveys. They were also provided a copy of the AusLM Field Manual, which provides comprehensive guidelines on all aspects of the litter count method.

Data was collected on tablet devices, on a custom excel based database created by KABC. Litter observed was classified based on the 247 items in the current AusLM categorisation (refer Appendix 2).

The survey team worked in pairs, completing one location per team, per day. Transect establishment and set up was completed by both team members, and for litter counting there was one "spotter" to call out the items, and one person recording data to the tablet.

Site information was collected to ascertain if certain factors impacted the litter levels (such as waste and recycling bins, public transport stops, BBQ areas in parks).

Final data collation, review and analysis has been completed by Perth NRM.

Measurement Methodology

AusLM uses a standing stock visual litter count. This method was chosen as the most appropriate way of answering questions about broad trends and achievements at the jurisdictional scale. Under this method, litter items are counted and categorised in a defined area and litter is left in place. It is a relatively fast and cost-effective method that indicates the extent and composition of litter at a site at a point in time.

Data Calculation Basis

The following calculations have been utilised throughout the report:

Number of items (#)	total number of individual items counted
Items (#) per 1000m²	$\frac{\text{total number of individual items counted}}{\text{total square metres surveyed}} \times 1000$
Volume – litres (l)	total number of individual items counted x standard volume per item*
Volume (l) per 1000m²	$\frac{\text{total number of individual items counted} \times \text{standard volume per item}}{\text{total square metres surveyed}} \times 1000$

* The estimated standard volume for each item is attached at Appendix 3.

2. Overall Litter Data

Summary

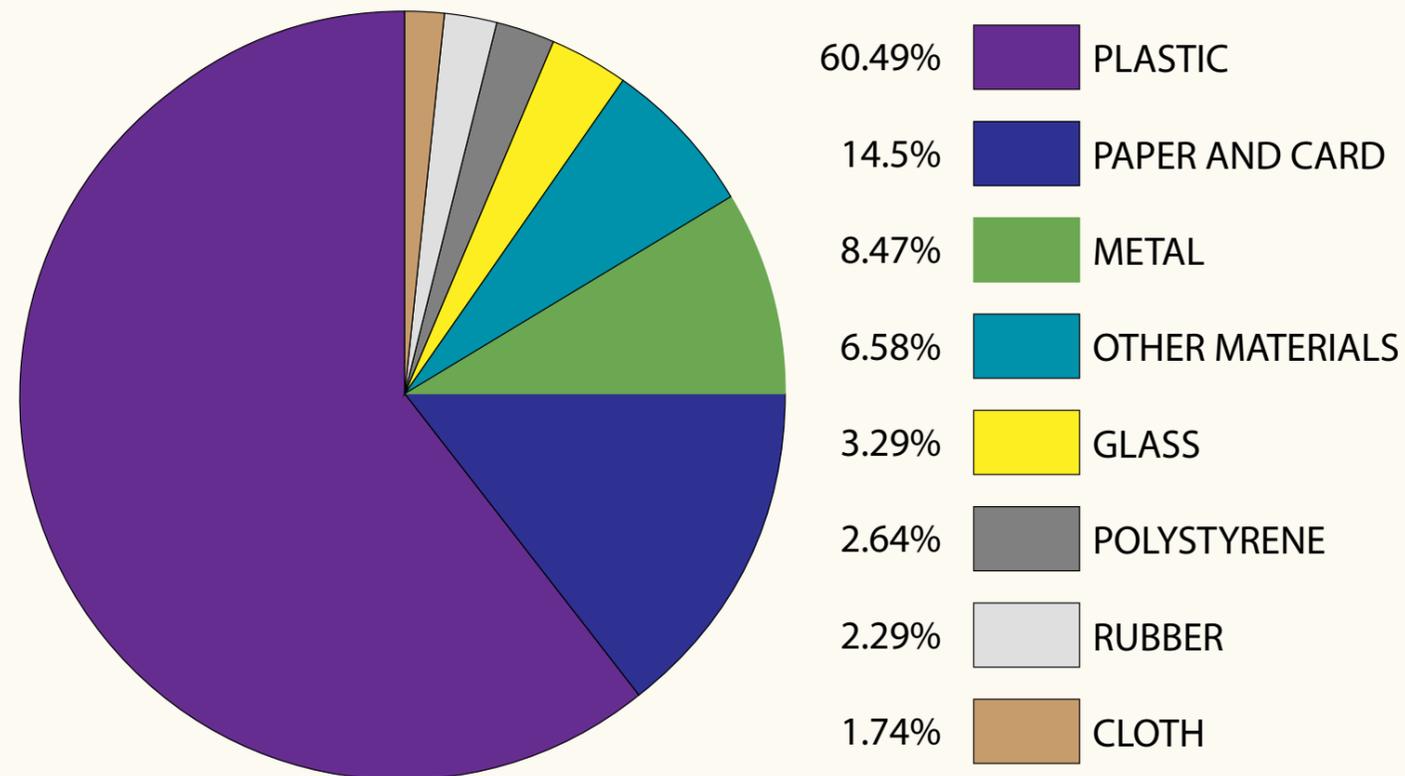

Full detail on all litter items counted has been provided at Appendix 2, in the AusLM count sheet format.

In summary, across 104,725.97 square metres surveyed, a total of 18,245 items of litter were counted, with a calculated volume of 1,145.65 litres.

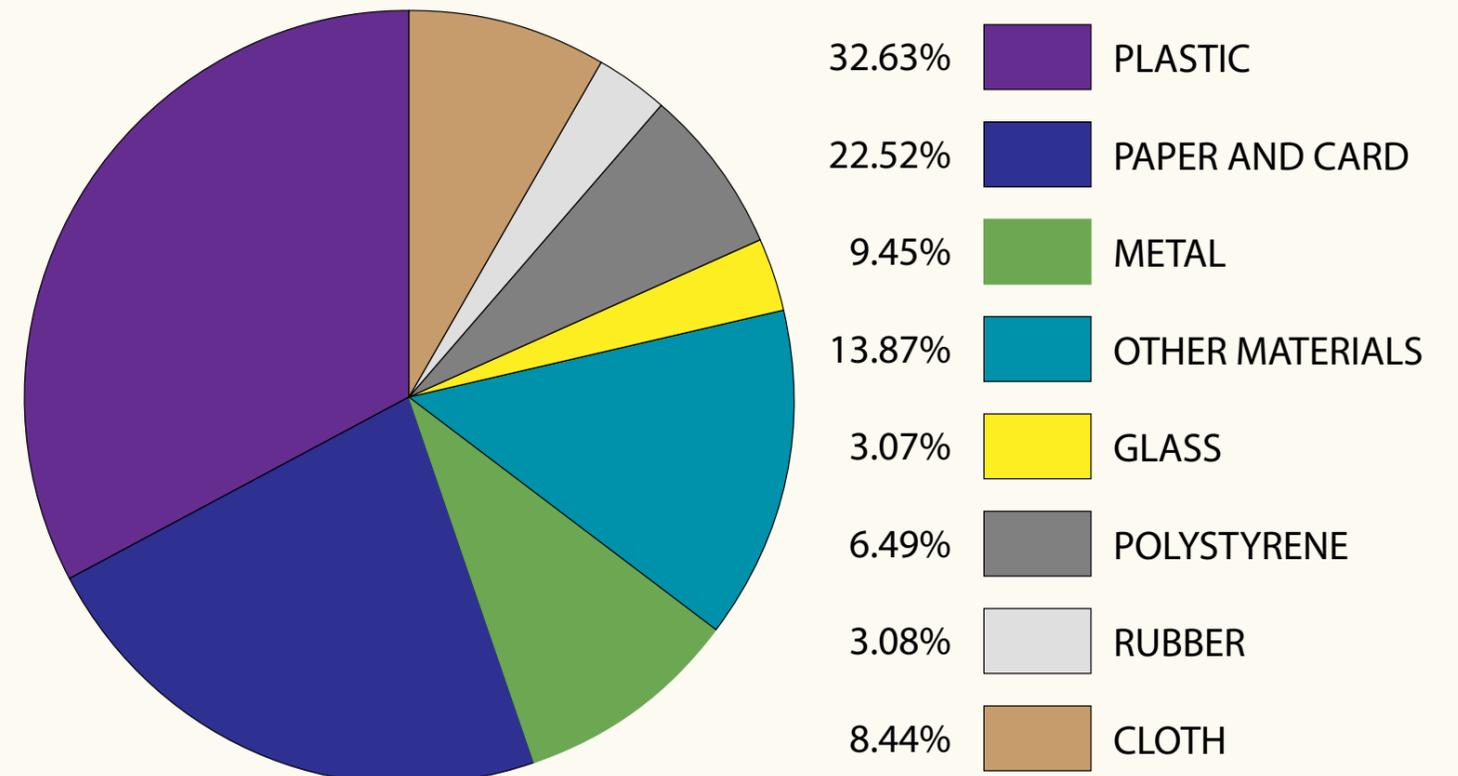

Of all litter items counted, 60.49% was made of Plastic (including Hard Plastic, Soft Plastic and Fragments). From a volume perspective, Plastic items accounted for 32.63% of the litter, with Paper and Card the second largest contributor, at 22.52% of total volume.

SUMMARY LITTER DATA				
Total Area Surveyed (m ²)	Total Litter Items	Litter Items /1000m ²	Total Litter Volume (l)	Litter Volume (l)/1000m ²
104,725.97	18,245	174.22	1,145.65	10.94

Takeaway food container	22.5	0.21
Other cloth item	21.8	0.21

General Data Commentary and Key Findings

- Western Australia has had a Container Deposit Scheme (“CDS”), named “Containers for Change” in place since October 2020. Beverage containers counted including both CDS eligible and non-CDS eligible totalled 151 or 0.82% of total items. Of these, 124 were classified as CDS eligible. As a rough basis of comparison, in the 2019/20 Western Australian National Litter Index¹, the most recently completed litter surveys prior to the CDS being initiated, total beverage containers recorded averaged 1,038 or 12.05% of total items. This data was collected in November 2019 and May 2020 and would indicate the CDS scheme has been highly effective at reducing the number of beverage containers that persist in the environment.
- Cigarette Butts were the highest litter item from a count perspective, totalling 4,010 or 21.98% of total items counted. Volume wise, they were less significant, coming in 35th highest and accounting for 0.70% of total litter volume. Cigarette butts were highly concentrated in Retail, Main Road and Industrial sites, with 91.04% found in those three site types. Cigarette Butt bins weren’t commonly observed.
- Takeaway Packaging accounted for 2,423 or 13.28% of the total items counted, and 200.55 litres of the volume. Food/Confectionary Wrappers were the largest individual item by count within this category, with 826 items recorded. By volume, Paper/Card Food Packaging was the largest contributor, accounting for 43.38% of the total volume.
- Fragments made up a significant portion of litter items counted, totalling 7,058 across all categories and sizes. Hard Plastic Fragments were the most common material, accounting for 40.65% of the counted items, or 32.55% of the volume. Paper and Card Fragments were second most common, accounting for 20.92% of the counted items or 18.99% of the volume.
- Main Roads were the most highly littered site type, across both count and volume calculations. However, high levels of litter at Main Road sites was not a completely consistent trend across all locations, with a couple of sites driving the high litter figures for this site type. Industrial was the second highest site type, from both a count and volume perspective, and across the various locations, this high level of litter was a more consistent trend.
- The top four site types (Main Roads, Industrial, Residential and Retail) contributed 92.20% of total items counted, or 93.30% of the volume, leaving just 7.80% of items, or 6.7% of volume between the remaining two site types Parks and Beaches.
- The top litter item by count and volume for each site type is summarised to the right, with further data and analysis provided for both site types, and key litter items and categories in Sections 3 and 4.

TOP LITTER ITEM BY COUNT AND SITE TYPE		
Site Type	Item	Total Items
Beach	Hard Plastic Fragment - Small	107
Retail	Cigarette Butts and Filters	1,146
Residential	Cigarette Butts and Filters	233
Industrial	Cigarette Butts and Filters	1,400
Park	Paper and Card Fragment - Small	143
Main Road	Cigarette Butts and Filters	1,105

TOP LITTER ITEM BY VOLUME AND SITE TYPE		
Site Type	Item	Total Volume (l)
Beach	Rope/String	4
Retail	Paper/Card Food Packaging	15.5
Residential	Paper/Card Food Packaging	12
Industrial	Other Polystyrene Item	32.5
Park	Aluminium Foil Wrap	5.5
Main Road	Other Food Package	41

¹ KAB Litter Index WA 2019-20 PowerPoint Presentation (kabc.wa.gov.au) retrieved June 2022

3. Litter Data by Site Type

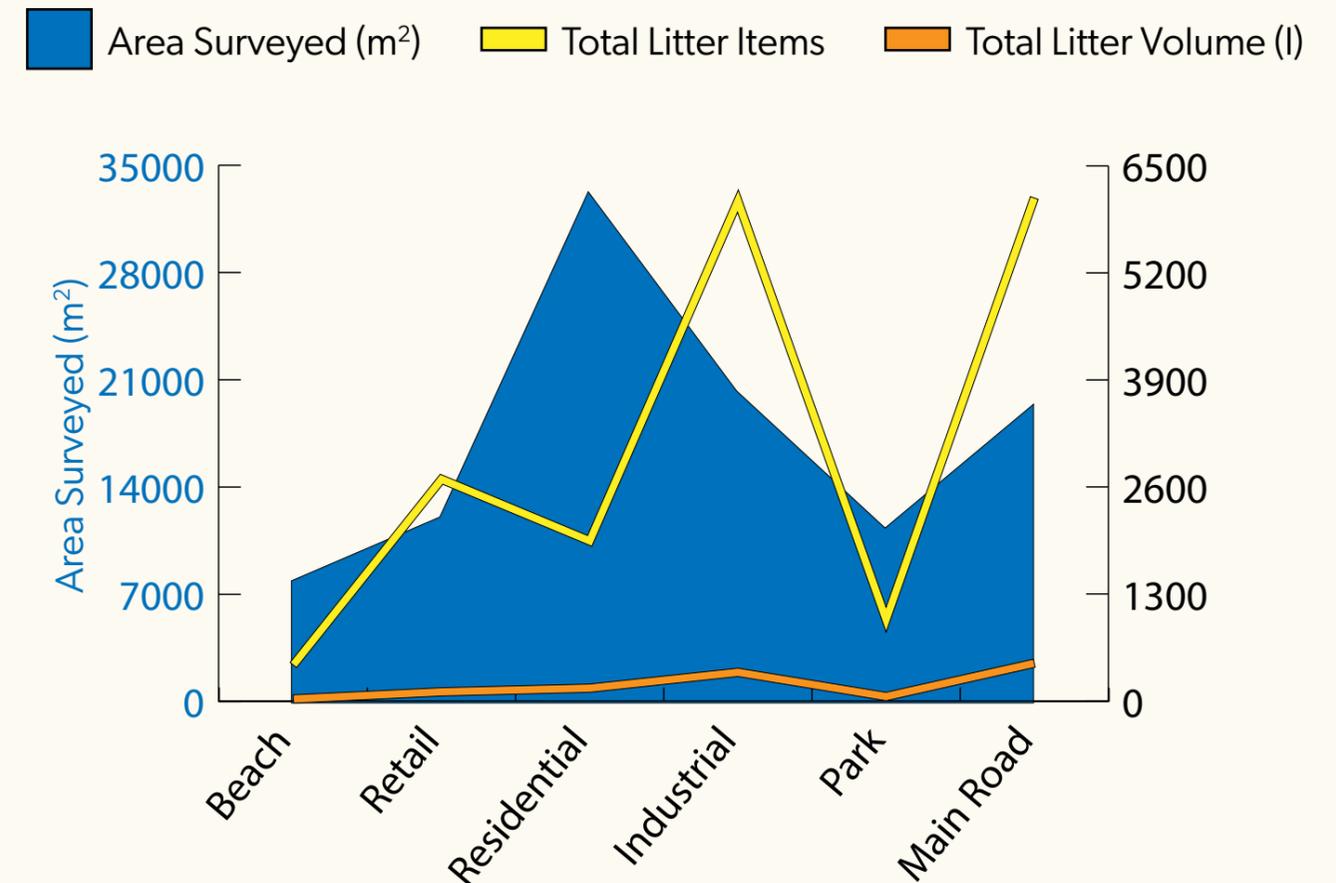

The AusLM method involves litter counts at six distinct site types. Each site type is defined in the AusLM Field Manual, along with exclusion criteria that can render a site “failed” (refer Appendix 1). Sites noted as failed were counted and included in this overall litter count, but the failure and reason for fail will be reviewed in the planning stages of any future litter survey work.

Residential sites contributed the largest area surveyed, with over 33,000 square metres surveyed. Residential sites consist of variable widths, defined as road’s edge to property boundary, meaning transect widths of up to 8m were surveyed (average width was 5.5m).

Beaches contributed the smallest area to the survey, with just under 8,000 square metres surveyed. This lower representation is explained by three sites not having a suitable beach to survey, as well as the variable length of beach transects resulting in some being comparatively short i.e., distance dune to water was in some cases only roughly 15m. (The average beach transect length was 38m). The varying areas surveyed across the different site types is adjusted for in the normalised (/1000m²) figures below and further discussed on the following page.

LITTER DATA BY SITE TYPE					
Site Type	Total Area Surveyed (m ²)	Number of Items	Items /1000m ²	Total Volume (l)	Volume (l) /1000m ²
Beach	7,967.40	436	54.72	23.66	2.97
Retail	12,131.00	2,693	221.99	109.73	9.05

Total	104,725.97	18,245	174.22	1,145.65	10.94

May 2022 Litter Survey
Area, Litter Count and Litter Volume by Site Type

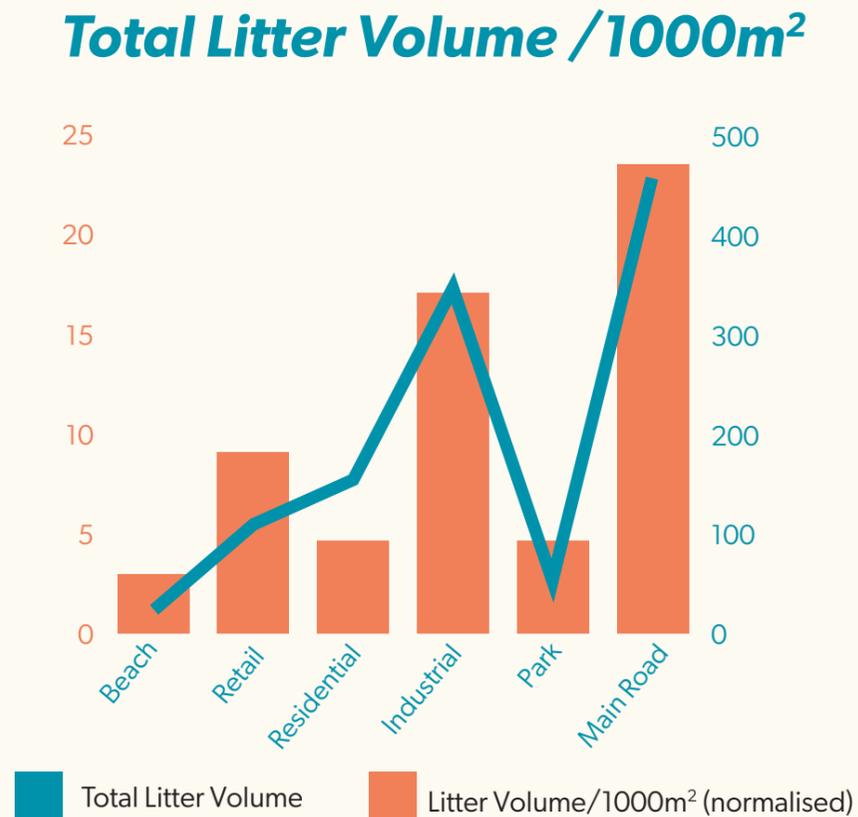

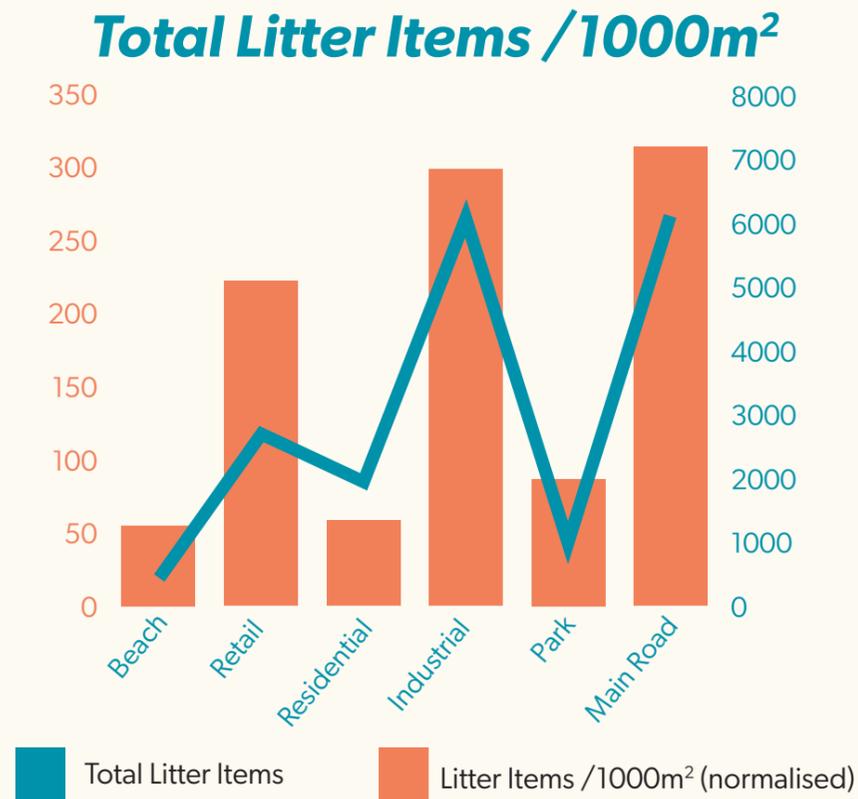

Normalised Litter Data by Site Type

Raw litter data (# of items and volume of items) has been normalised, to adjust for the varying total square metres surveyed across each site type, and to enable more accurate comparisons about the density of litter. Normalising the data involved scaling up the total litter items and volume over a standard 1,000 sqm area, to remove the impact of the varying square metres surveyed by site type. The formulas to normalise the data are detailed in Section 2.

The normalised figures are closely aligned with the raw data trend lines for both total litter items and total litter volume, across most site types with the exception of Retail and Residential.

Retail shows higher calculated litter items and volume per 1,000m² than the raw total litter items/volume trendlines, a result of the relatively low area surveyed for Retail – and highlighting that the raw data alone somewhat understates the scale of litter in Retail sites.

Conversely, Residential sites show lower calculated litter items and volume per 1,000m² than the raw data, indicating that the litter density at Residential sites was lower than the average, once the area surveyed was taken into account.

Litter Items by Site Type

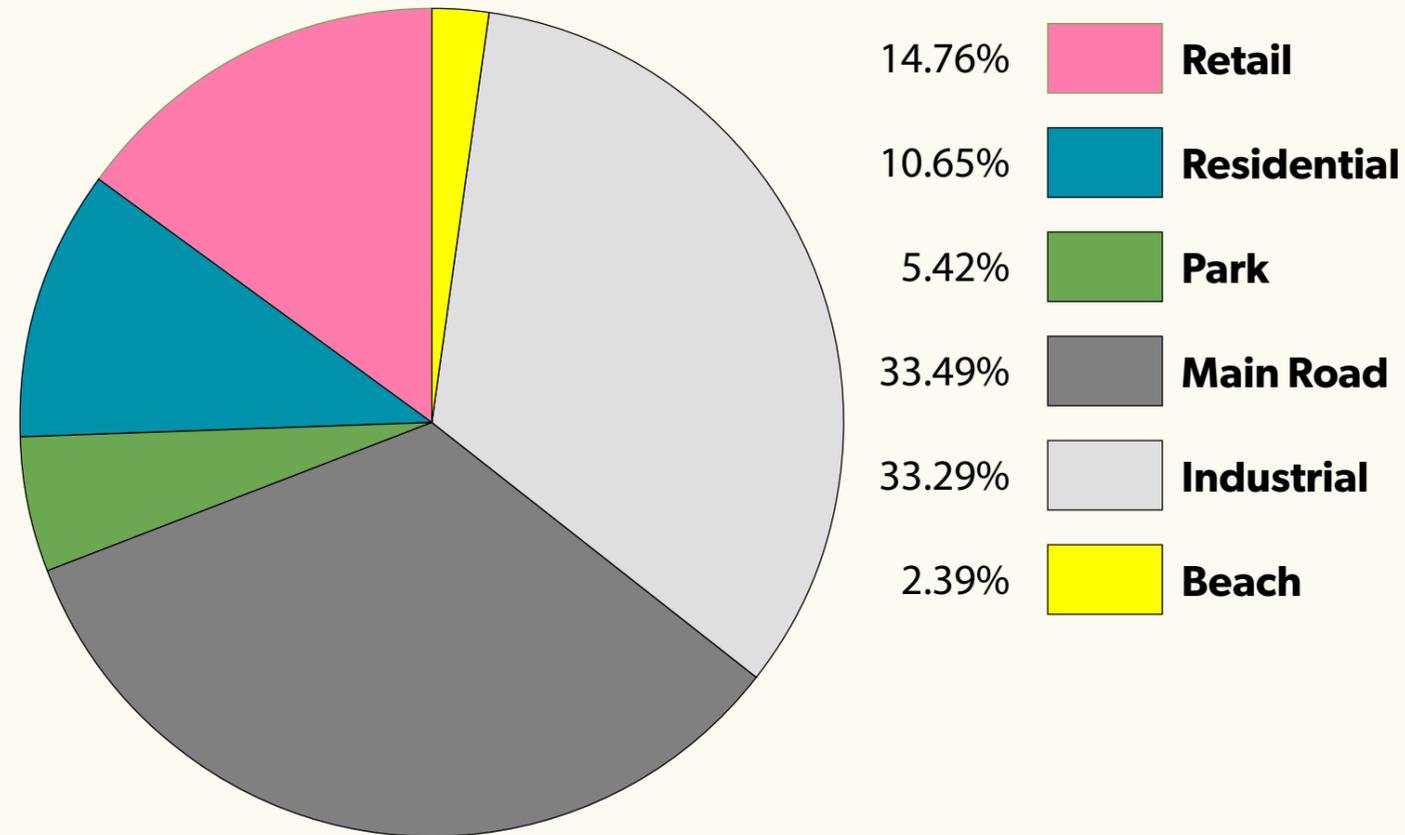

From a count perspective Main Roads was the site type with the highest litter, accounting for 6,111 items or 33.49% of the total litter items surveyed.

Industrial was second highest, accounting for a further 6,073 items or 33.29%.

Together, Industrial and Main Roads contributed 66.78% of the total items counted.

Retail sites were the third highest, with 2,693 items, accounting for 14.76% of the total litter items.

Beaches contained the lowest litter levels, with only 436 items counted, equating to just 2.39% of the total items.

Litter Volume by Site Type

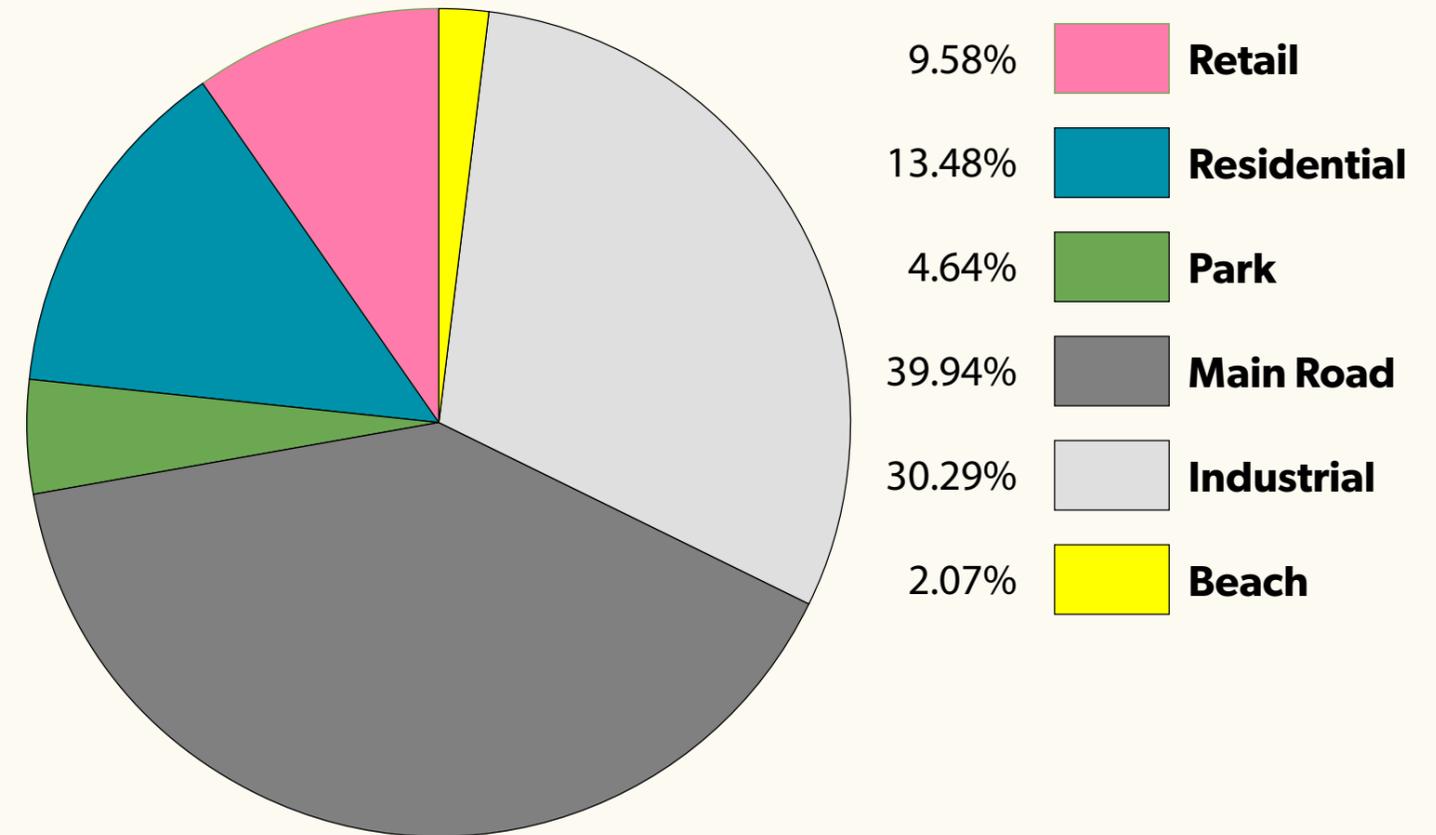

Main Roads was also the site type with the highest litter by volume, accounting for 39.94% of the total calculated litter volume.

The increased % of volume (compared to count) indicates that there is a trend towards larger, bulkier items being littered in Main Road sites, or that larger items persist for longer in a Main Road setting, compared to other site types.

Industrial remained second highest site type by volume.

Residential jumped into third place from a volume perspective, up from fourth by count.

Beaches contained the lowest litter levels by volume, accounting for just 2.07% of the calculated total volume.

Site Type Summary – Beach

SITE SNAPSHOT	
Total Number of Items - (#)	436
Total Volume of Items- (l)	23.66
Items /1000m ²	54.72
Volume (l)/1000m ²	2.97
Top 3 Items – Number (#)	Hard plastic fragments – Small Cigarette butts and filters Food/confect. wrappers
Top 3 Items – Volume (l)	Rope/String Other Plastic Item Clothing
Highest Site Litter Count – Number (#)	199
Highest Site Litter Count – Volume (l)	6.67
Lowest Site Litter Count – Number (#)	4
Lowest Site Litter Count – Volume (l)	0.31

Common Site Features/Observations

General waste bins were frequently observed within Beach Sites, although not often within the transects themselves (i.e., they were often located on grassed, recreation areas adjacent to beach, or at beach carparks).

Recycling bins were observed on occasion, as well as one instance where a Containers for Change bin was noted. Evidence of cleaning (raking lines etc) was not noted at any Beach site; however Community Groups regularly coordinate beach clean-ups, which may contribute to the low levels of litter observed.

Hard Plastic Fragments made up the highest individual item found at Beach sites. This high volume of fragments could indicate that a lot of the litter found has travelled to the beach through waterways or been deposited on the beach from tidal movements (and been broken into fragments in transit).

For Beach sites without an engineered back, the survey area extended two metres into the dunes, and this was frequently a place where litter was observed.

Site Type Summary – Retail

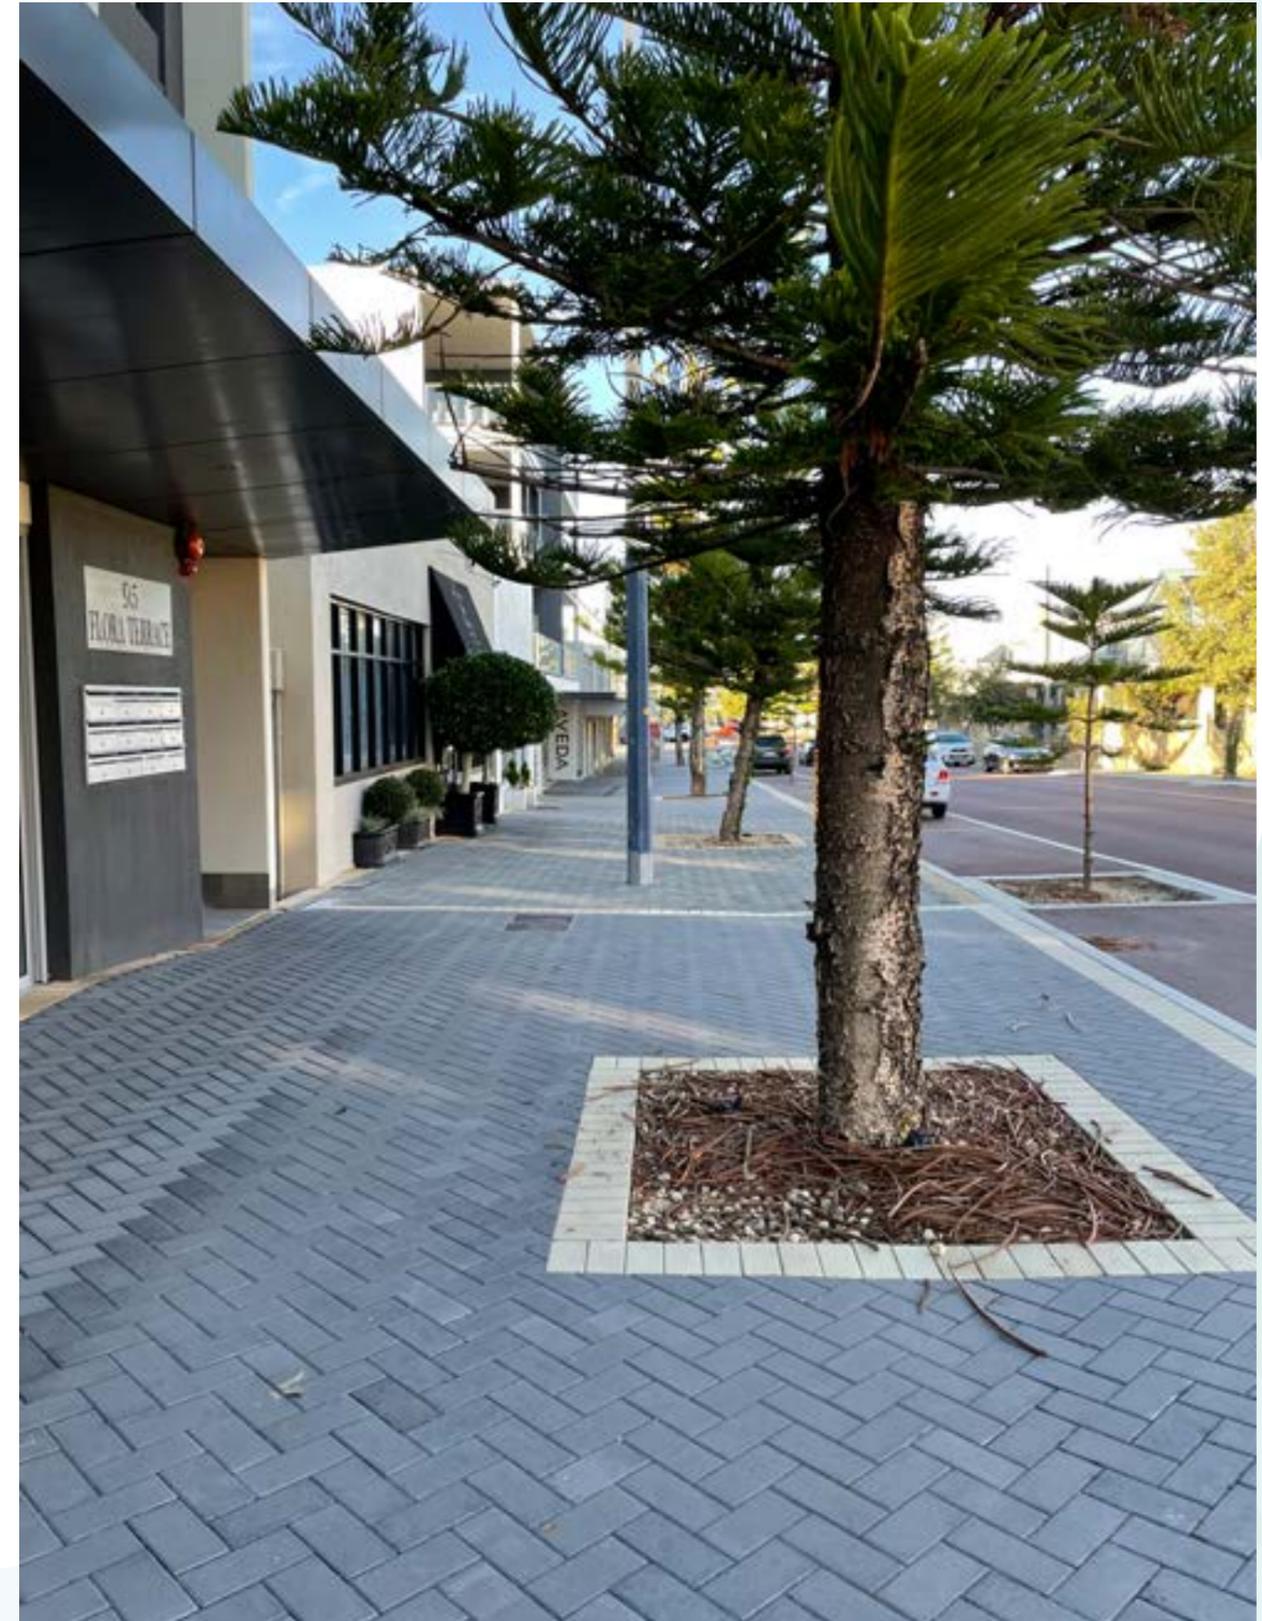

SITE SNAPSHOT	
Total Number of Items - (#)	2,693
Total Volume of Items- (l)	109.73
Items /1000m ²	221.99
Volume (l)/1000m ²	9.05
Top 3 Items – Number (#)	Cigarette butts and filters Paper and Card fragments – Small Food/confect. wrappers
Top 3 Items – Volume (l)	Paper/card food packaging Food/confect. wrappers Clothing
Highest Site Litter Count – Number (#)	554
Highest Site Litter Count – Volume (l)	25.53
Lowest Site Litter Count – Number (#)	38
Lowest Site Litter Count – Volume (l)	0.94

Common Site Features/Observations

Litter bins were frequently observed within Retail sites – most commonly general waste bins, but occasionally also comingled recycling.

Of all site types, evidence of cleaning was most common amongst retail sites, but interestingly it was sometimes confined to only certain sections of a transect, i.e., on occasion just outside particular shopfronts, (presumably by individual tenants), resulting in variable levels of litter along a single transect.

Some retail transects included access ways/alleys behind the shopfronts themselves and these tended to be more highly littered, as they often contained commercial bin areas.

Site Type Summary – Residential

SITE SNAPSHOT	
Total Number of Items - (#)	1,944
Total Volume of Items- (l)	154.48
Items /1000m ²	58.27
Volume (l)/1000m ²	4.63
Top 3 Items – Number (#)	Cigarette butts and filters Hard plastic fragment – Small Paper and Card fragment – Small
Top 3 Items – Volume (l)	Paper/card food packaging Personal effects Construction materials
Highest Site Litter Count – Number (#)	620
Highest Site Litter Count – Volume (l)	61.42
Lowest Site Litter Count – Number (#)	89
Lowest Site Litter Count – Volume (l)	4.72

Common Site Features/Observations

Residential sites accounted for the highest area surveyed of any of the site types. Despite this, the total items counted within Residential sites was 3rd lowest.

The low level of litter may suggest individual householders regularly take responsibility for collection of litter items that end up on their verge area.

Site Type Summary – Industrial

SITE SNAPSHOT	
Total Number of Items - (#)	6,073
Total Volume of Items- (l)	347.04
Items /1000m ²	298.28
Volume (l)/1000m ²	17.04
Top 3 Items – Number (#)	Cigarette butts and filters Hard plastic fragment – Small Soft plastic fragment – Small
Top 3 Items – Volume (l)	Other polystyrene item Paper/card food packaging Clothing
Highest Site Litter Count – Number (#)	1,140
Highest Site Litter Count – Volume (l)	63.84
Lowest Site Litter Count – Number (#)	224
Lowest Site Litter Count – Volume (l)	14.00

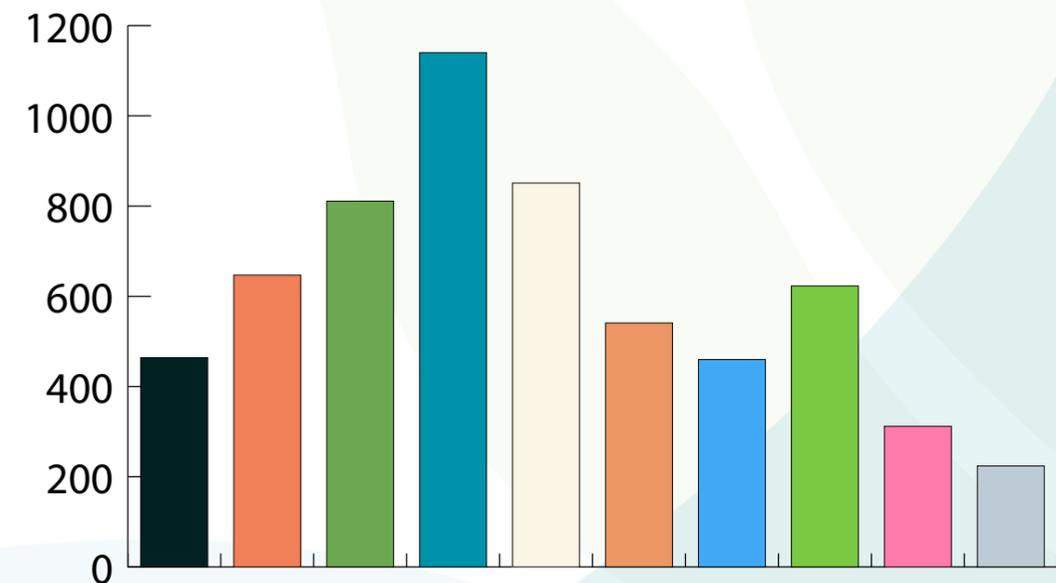

Common Site Features/Observations

Industrial sites contained the second highest litter load, across all measures (count, count/1000m², volume, and volume/1000m²). Litter levels were consistently high across most locations, with an average of 607 items per site.

Industrial sites frequently appeared to be highly littered. Verges tended to be poorly maintained and were often very functional spaces used to park vehicles.

They were rarely landscaped, and public bins were not commonly noted. Installation of rubbish, cigarette butt and Containers for Change bins in Industrial areas may have potential to greatly reduce the volume of litter at these sites.

LITTER COUNT BY INDUSTRIAL SITE

Site Type Summary – Park

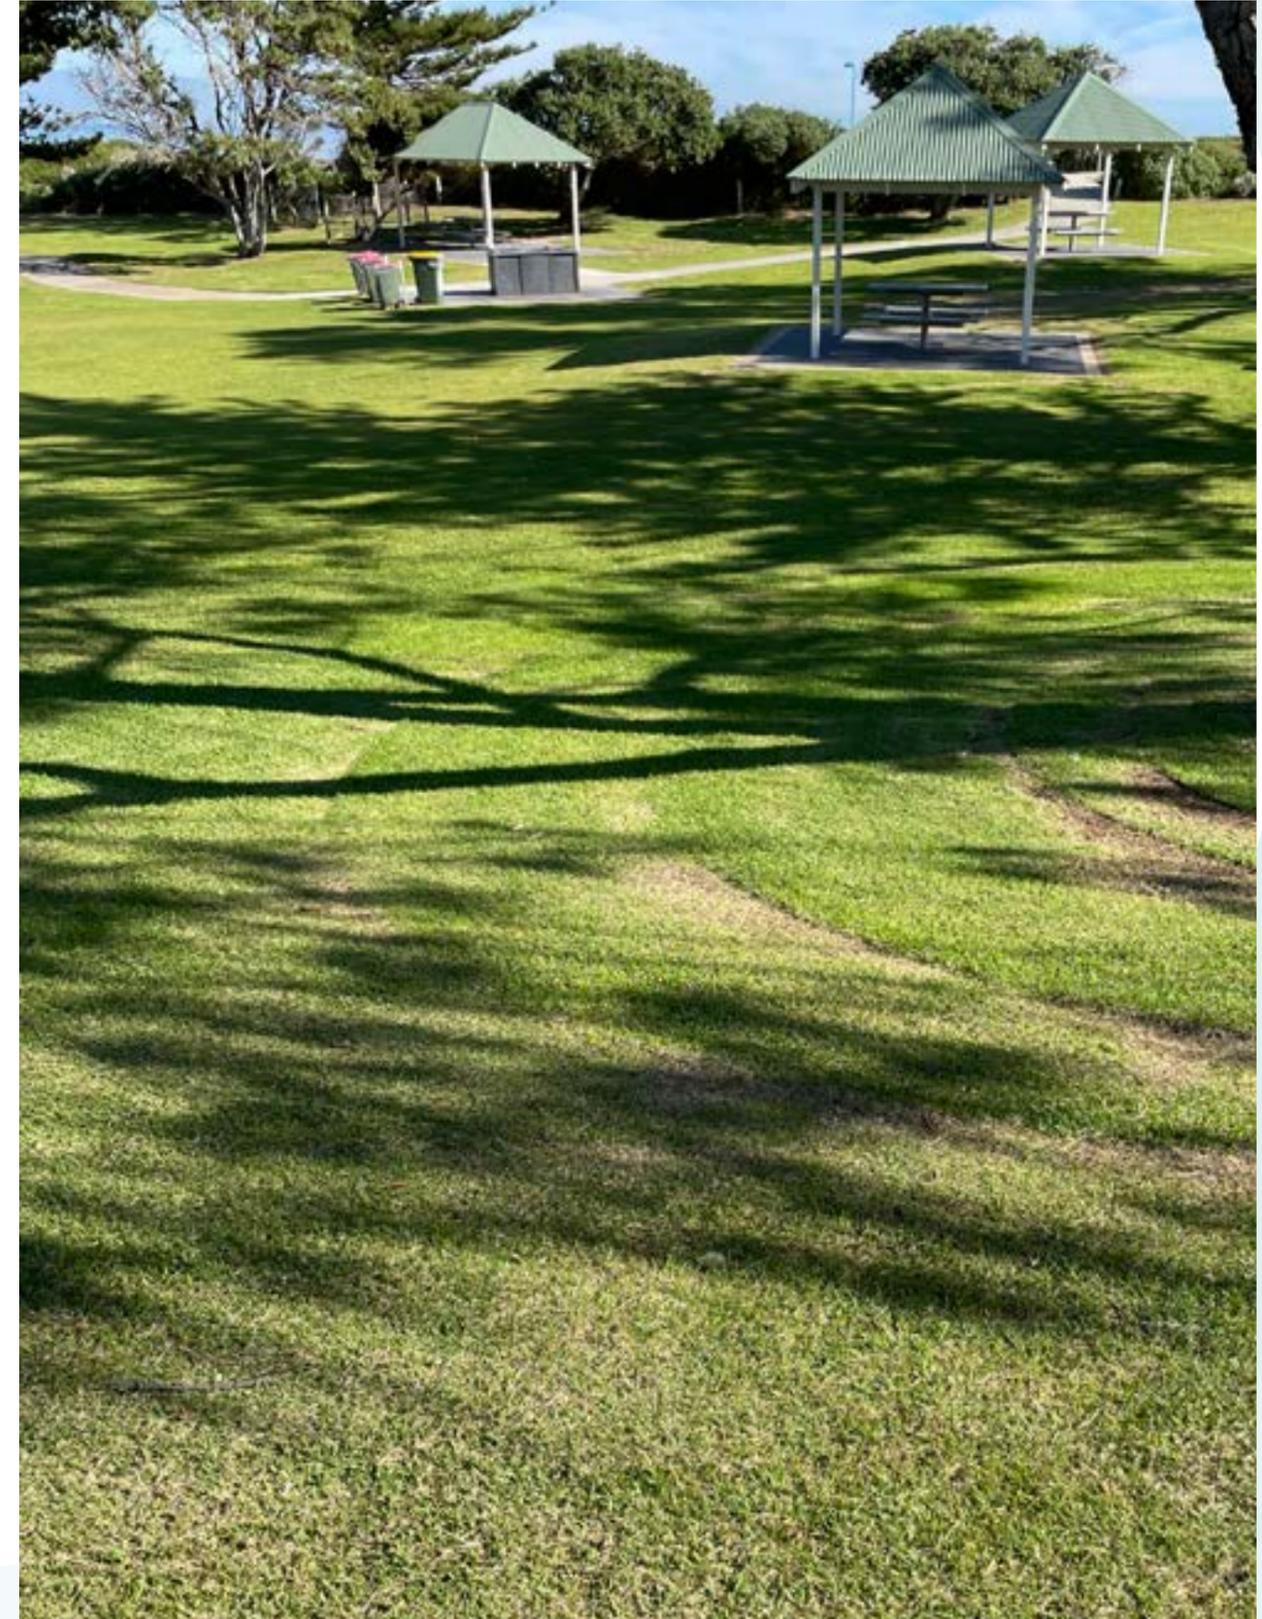

SITE SNAPSHOT	
Total Number of Items - (#)	988
Total Volume of Items- (l)	53.11
Items /1000m ²	86.57
Volume (l)/1000m ²	4.65
Top 3 Items – Number (#)	Paper and Card fragment – Small Soft plastic fragment – Small Cigarette butts and filters
Top 3 Items – Volume (l)	Aluminium foil wrap Paper/card food packaging Food/confect. wrappers
Highest Site Litter Count – Number (#)	299
Highest Site Litter Count – Volume (l)	14.50
Lowest Site Litter Count – Number (#)	22
Lowest Site Litter Count – Volume (l)	112

Common Site Features/Observations

Overall, parks were one of the lowest littered sites. Items identified as fragments (of all materials and sizes) accounted for 422 or 42.71% of the litter counted, possibly a result of mowing that frequently occurs at public parks.

Litter bins were commonly observed at park sites.

The recorded presence of features such as BBQs, playgrounds and bench seating within the individual transects often appeared to impact the litter load (the highest transect count within each site type was noted to contain a BBQ, playground or bench seating at 7 of 10 locations).

Site Type Summary – Main Road

SITE SNAPSHOT	
Total Number of Items - (#)	6,111
Total Volume of Items- (l)	457.62
Items /1000m ²	313.51
Volume (l)/1000m ²	23.48
Top 3 Items – Number (#)	Cigarette butts and filters Hard plastic fragment – Small Paper and card fragment – Small
Top 3 Items – Volume (l)	Other Food Package Clothing Paper/card food packaging
Highest Site Litter Count – Number (#)	2,324
Highest Site Litter Count – Volume (l)	232.18
Lowest Site Litter Count – Number (#)	98
Lowest Site Litter Count – Volume (l)	4.11

Common Site Features/Observations

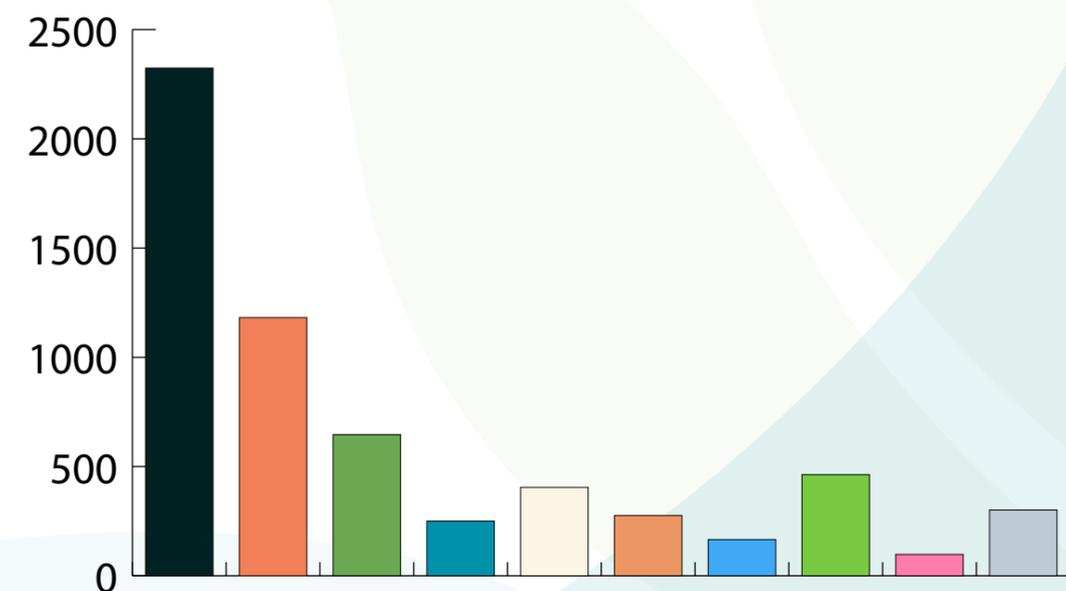

Main Roads were found to be the highest littered sites across all measures (count, count/1000m², volume, and volume/1000m²).

Across the 10 sites, the average litter per site was 611 items, however as demonstrated in the graph opposite, there were two highly littered sites that together accounted for 3,506 or 57.37% of the litter.

With these removed the average litter per Main Road site reduces to 326, indicating the litter load in Main Roads is not a consistent issue across all areas.

Litter appeared to be distributed along Main Road sites evenly where footpaths were and were not present, suggesting that litter discarded from vehicles was a contributing factor/source. As a result, continued messaging around not littering from car windows, as well as installation of more bins in targeted roadside areas may be strategies that would reduce the litter at these sites.

LITTER COUNT BY MAIN ROADS SITE

4. Key Categories and Items

Single Use Plastics

Single Use Plastics include items captured by the WA Government’s “Plan for Plastics”, a phased Single Use Plastic ban, which came into effect on 1st January 2022.

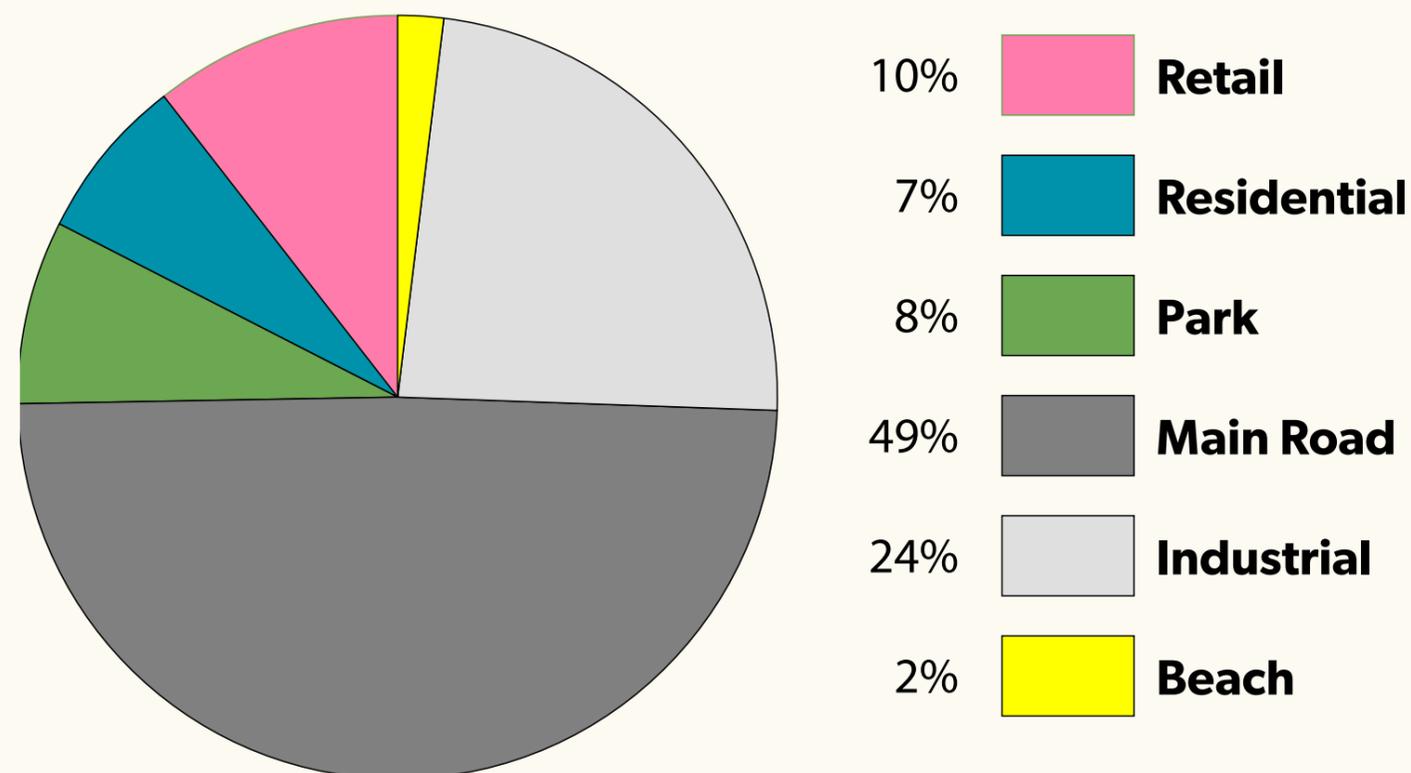

Items include single use plastic bags, cutlery, straws, plastic cups and lids, coffee cups and lids and polystyrene food containers. Refer Appendix 4 for a count sheet indicating all items captured in this category.

‘Other Food Packaging’ contributed the largest quantity and volume of Single Use Plastic waste, totalling 119 items, or 59.5 litres. This equated to 17.95% of the number of items, or 44.94% of the volume.

Straws were second highest by count, with 114 items recorded, but represented only 0.43% of the total volume.

Takeaway food containers, with 45 items counted, were the second largest contributor by volume.

CONCENTRATION OF SINGLE USE PLASTICS BY SITE

KEY ITEM SNAPSHOT: SINGLE USE PLASTICS	
Total Number of Items - (#)	663
Total Volume of Items- (l)	132.41
Highest Site Litter Count – Number (#)	217
Highest Site Litter Count – Volume (l)	58.12
Lowest Site Litter Count – Number (#)	0
Lowest Site Litter Count – Volume (l)	0

Bag - Heavy Boutique	4	4
Food pack./clam shells	2	1
Plate/bowl – single use	2	0.4
Bag - Mesh Bags	1	0.1
TOTAL	663	132.41

Beverage Containers

The analysis below has been provided for beverage containers eligible for a 10c refund under Western Australia's CDS.

A large portion of CDS containers found were in Industrial and Main Road sites, with these two site types alone accounting for 76.61% of items counted. No CDS containers were observed at Beach sites. One Beach site contained a dedicated CDS collection bin, which had some containers present.

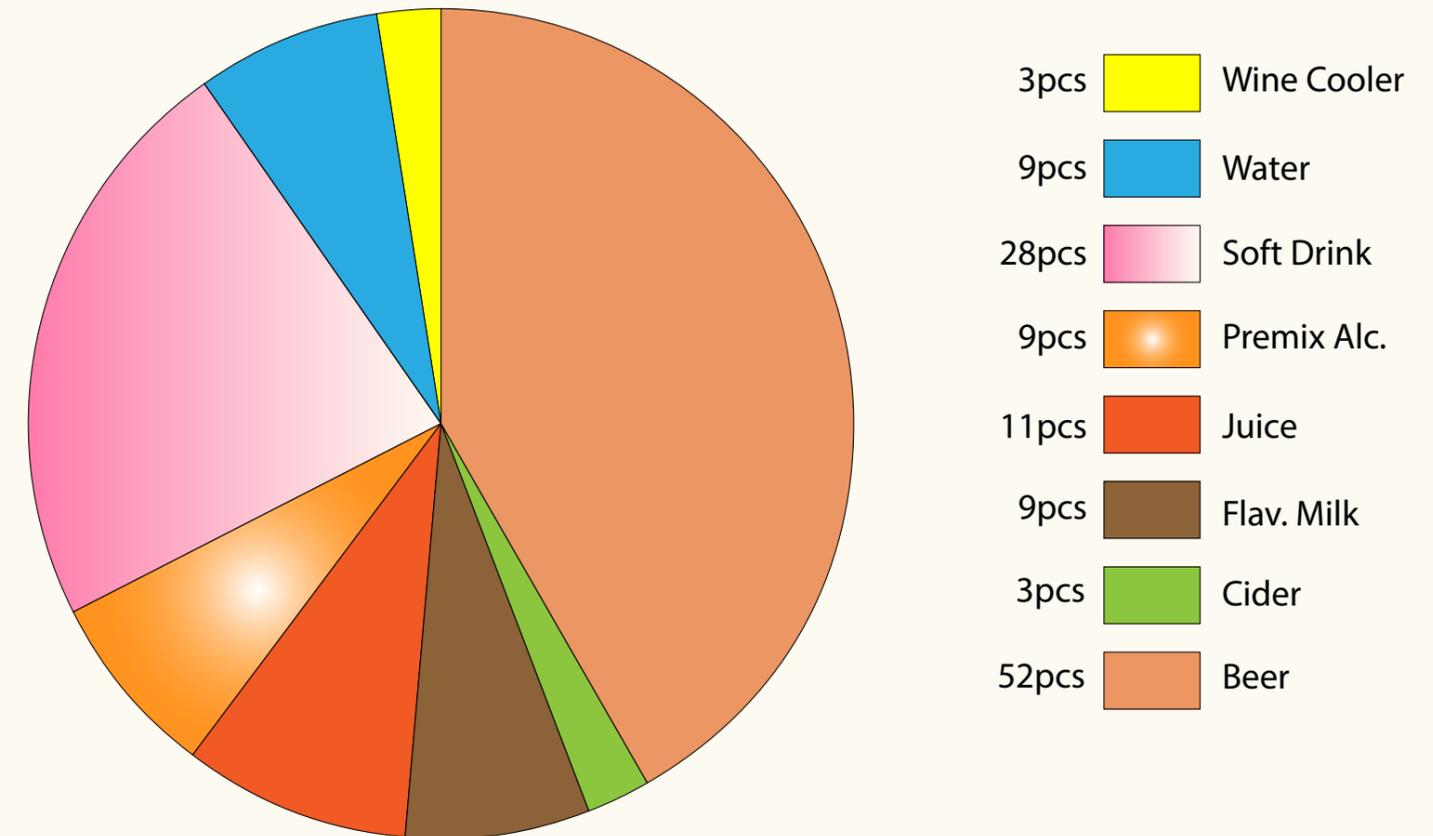

Beer was the largest contributor, accounting for 52 of the 124 items, or 41.94%. Soft drinks were the second highest, accounting for 22.58%

KEY ITEM SNAPSHOT: BEVERAGE CONTAINERS (CDS)	
Total Number of Items - (#)	124
Total Volume of Items- (l)	56.18
Highest Site Litter Count – Number (#)	18
Highest Site Litter Count – Volume (l)	9
Lowest Site Litter Count – Number (#)	0
Lowest Site Litter Count – Volume (l)	0

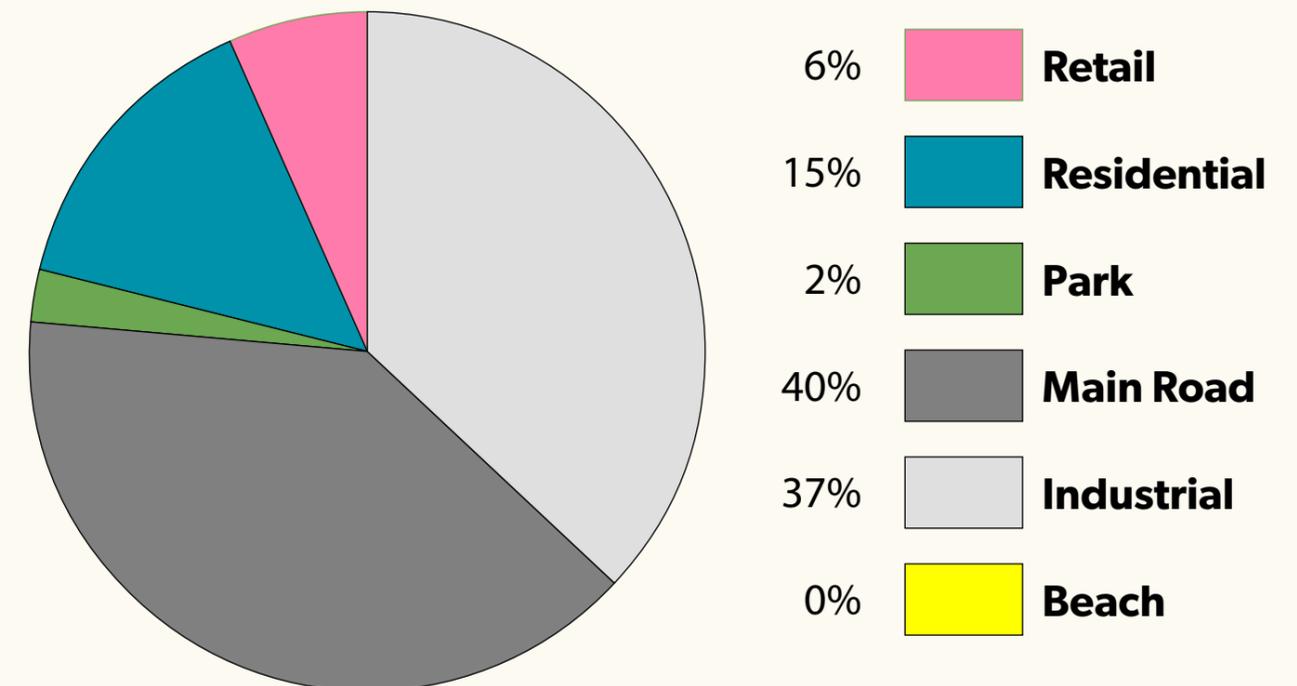

Other Non-CDS Beverage Containers

Total Beverage Containers (including CDS and Non-CDS) was 151 – in addition to the reported 124 CDS containers there were a further 27 containers counted, that were classified as not being eligible for the CDS scheme.

BEVERAGE CONTAINERS (CDS) COUNT BY TYPE

Cigarette Butts

Cigarette Butts were the highest individual litter item by count, with a total of 4,010 Cigarette Butts (and filters) observed.

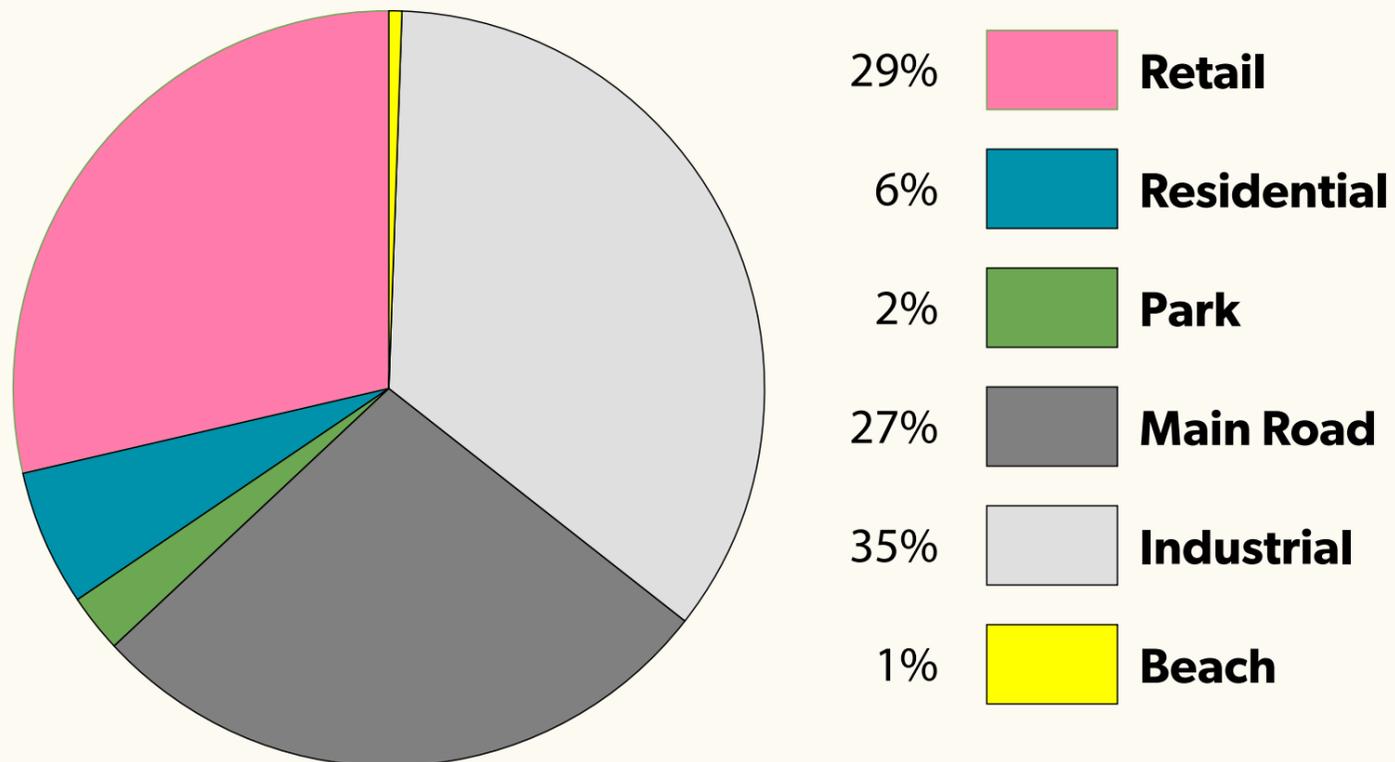

Together, Retail, Main Road and Industrial accounted for 91.04% of the total Cigarette Butts counted.

Cigarette Butt bins were not commonly observed at the locations surveyed, but the data would indicate installation of public cigarette butt bins may be of most benefit in Retail, Industrial and roadside (Main Road) areas (i.e., including public transport stops, rest points).

Messaging around collecting used butts in vehicles for proper disposal at a later date (i.e., utilising an ashtray) may reduce the volume of cigarette butts in both Main Road (tossed from window) and Industrial (disposed from parked cars) sites.

KEY ITEM SNAPSHOT: CIGARETTE BUTTS	
Total Number of Items - (#)	4010
Total Volume of Items- (l)	8.02
Highest Site Litter Count – Number (#)	360

Takeaway Food Packaging

Takeaway Food Packaging contains a range of materials used to wrap, package and transport takeaway foods. Refer Appendix 4 for a count sheet indicating all items captured in this category.

KEY ITEM SNAPSHOT: TAKEAWAY FOOD PACKAGING	
Total Number of Items - (#)	2,423
Total Volume of Items- (l)	200.55
Highest Site Litter Count – Number (#)	336
Highest Site Litter Count – Volume (l)	40.61
Lowest Site Litter Count – Number (#)	1
Lowest Site Litter Count – Volume (l)	0.001

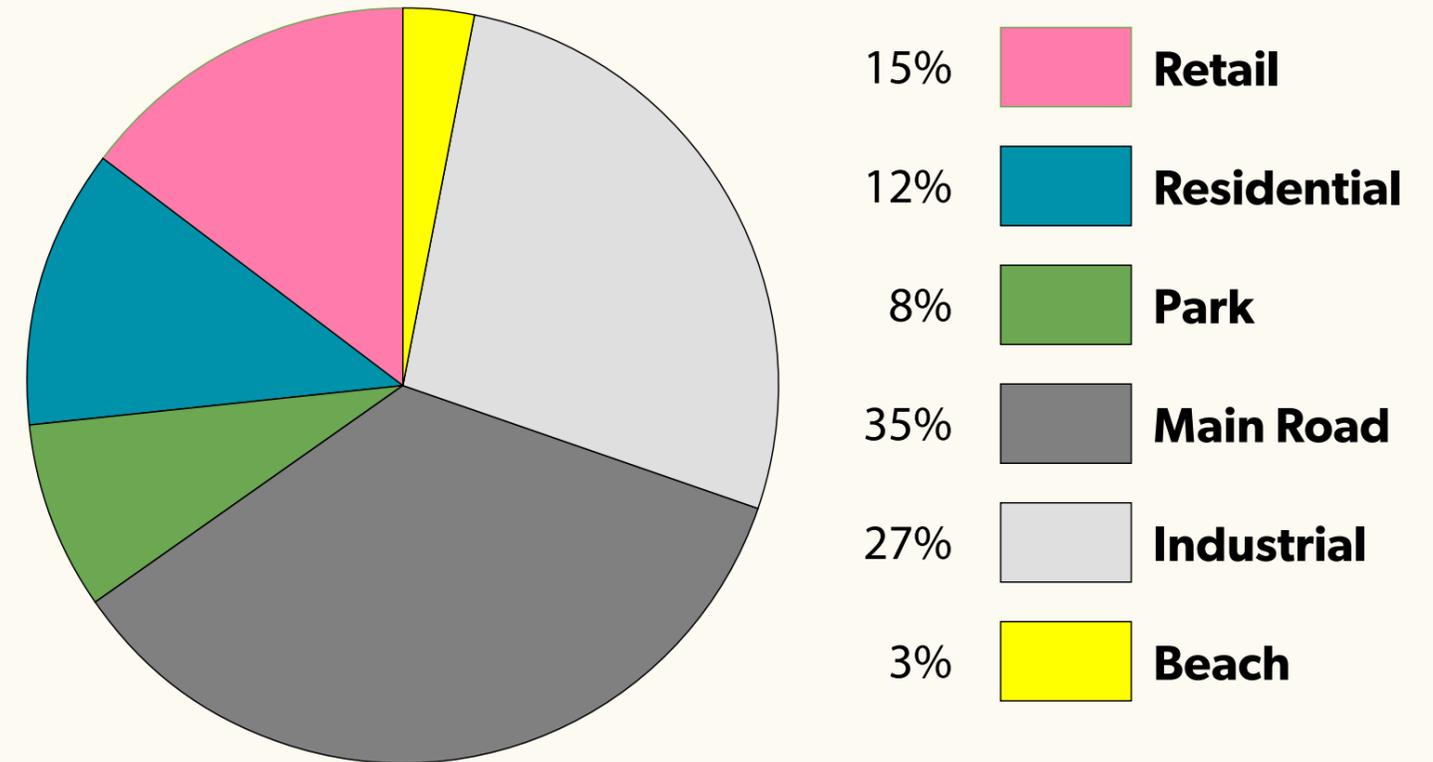

Takeaway Food Packaging accounted for 13.28% of the total litter items counted, and 17.50% of the volume.

The detail of individual items is provided on the following page, but the largest contributors by count were Food and confectionary wrappers, Metal lids/bottle caps and Plastic beverage container lids.

By volume, Paper and card food packaging was the largest contributor, followed by Food and confectionary wrappers and Plastic takeaway containers.

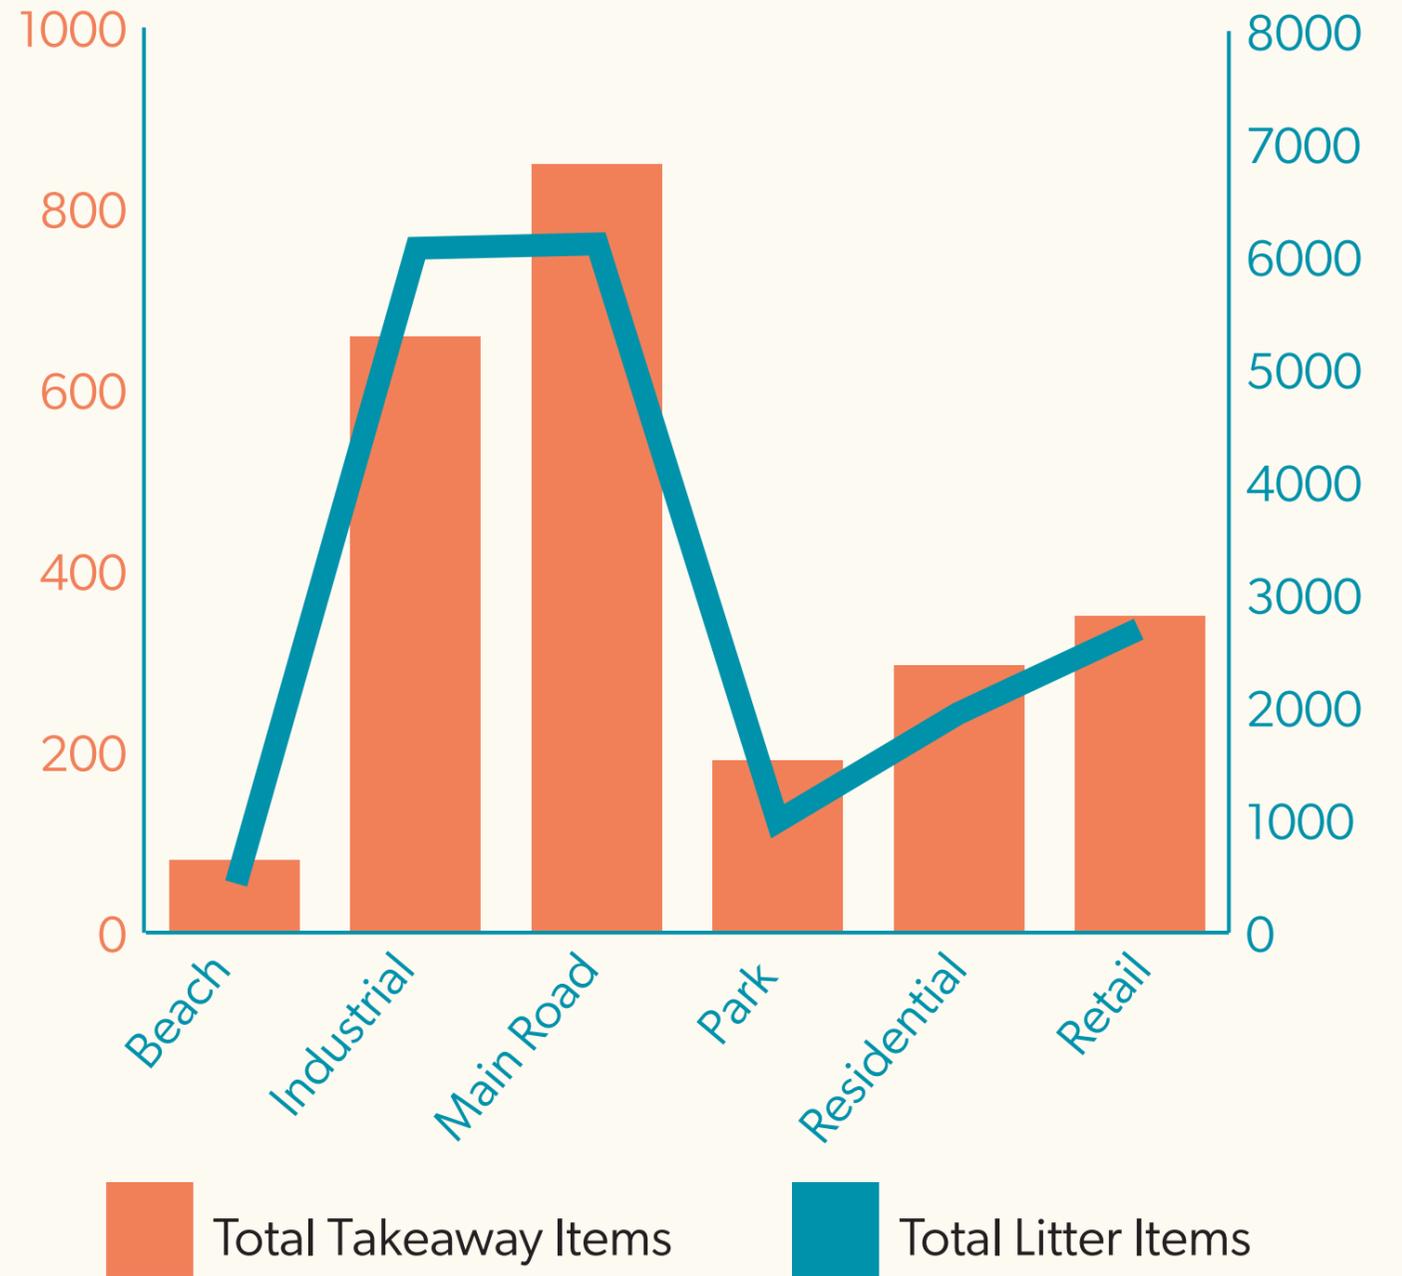

The number of takeaway items is closely aligned with the overall litter items by site type, with the exception of Industrial which was slightly below the trend line and Main Roads, which was slightly above. This indicates that Takeaway Food Packaging is proportionately the largest issue in the Main Road site type. This can be seen on the graph on page 23.

CONCENTRATION OF TAKEAWAY FOOD PACKAGING BY SITE

DETAIL - TAKEAWAY FOOD PACKAGING		
Item	# Items	Volume (l)
Food/confect. Wrappers	826	41.30
Lids, bottle tops, can ring pulls	478	0.96
Lids - Beverage container lids /caps	326	6.52
Paper/card food packaging	174	87.00
Straws	114	0.56
Lids - Plastic cup lid	99	1.98
Lollipop Sticks	69	0.07
Cup - Other paper cup	63	12.60
Cup – Single use	53	10.60
Takeaway food container	45	22.50
Cup - Coffee cup	38	7.60

Total	2,423	200.55

COMPARISON:
TAKEAWAY FOOD PACKAGING AGAINST TOTAL LITTER COUNT

Polystyrene

This category captures Polystyrene takeaway food packaging and cups, insulation and packaging, and fragments.

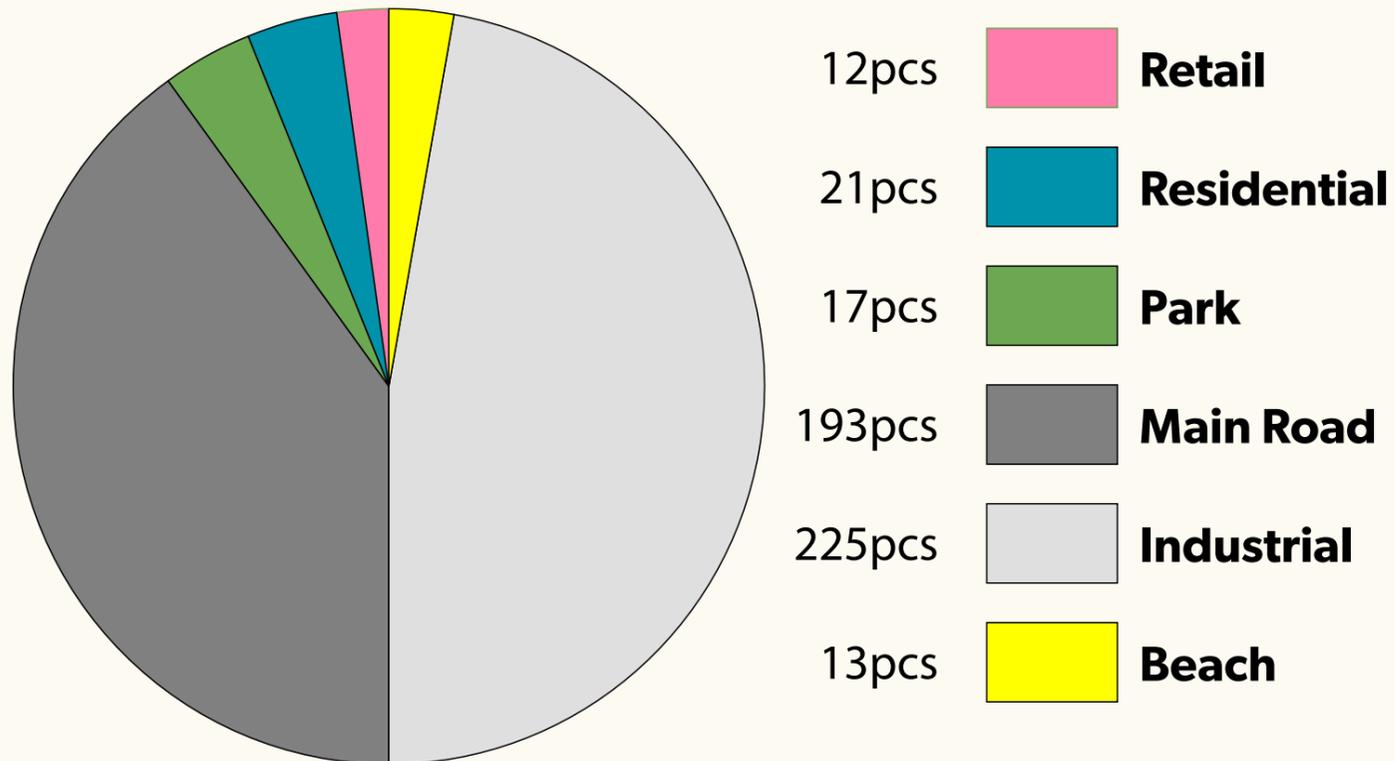

KEY ITEM SNAPSHOT: POLYSTYRENE	
Total Number of Items - (#)	481
Total Volume of Items- (l)	79.47
Highest Site Litter Count – Number (#)	97
Highest Site Litter Count – Volume (l)	15
Lowest Site Litter Count – Number (#)	0
Lowest Site Litter Count – Volume (l)	0

Fragments were the most common Polystyrene item found by count, with total fragments of all sizes accounting for 355 of the 481 items found, or 73.80%.

It was evident when completing the count, this high proportion of fragments within this category is a product of the fragile nature of polystyrene and its tendency to break into many smaller parts.

DETAIL - POLYSTYRENE		
Item	Number of Items	Total Volume (l)
Polystyrene Fragment - Small	268	6.43
Other polystyrene item	103	51.50
Polystyrene Fragment - Medium	67	3.22
Polystyrene Fragment - Large	20	1.92
Insulation & Packaging	14	14.00
Cups (foam)	7	1.40
Food pack./clam shells	2	1.00
Total	481	79.47

CONCENTRATION OF POLYSTYRENE BY SITE

Fragments - All Materials

Fragments are defined in the AusLM Field Manual as “pieces of litter [that are] either no longer identifiable as a whole item, or there is less than half of the whole item found in one or multiple contributing pieces”.

Fragments were counted and classified by their source material, and size;

- small (2.5 cm to 8 cm)
- medium (8 cm to 16 cm)
- Large (anything bigger than 16 cm)

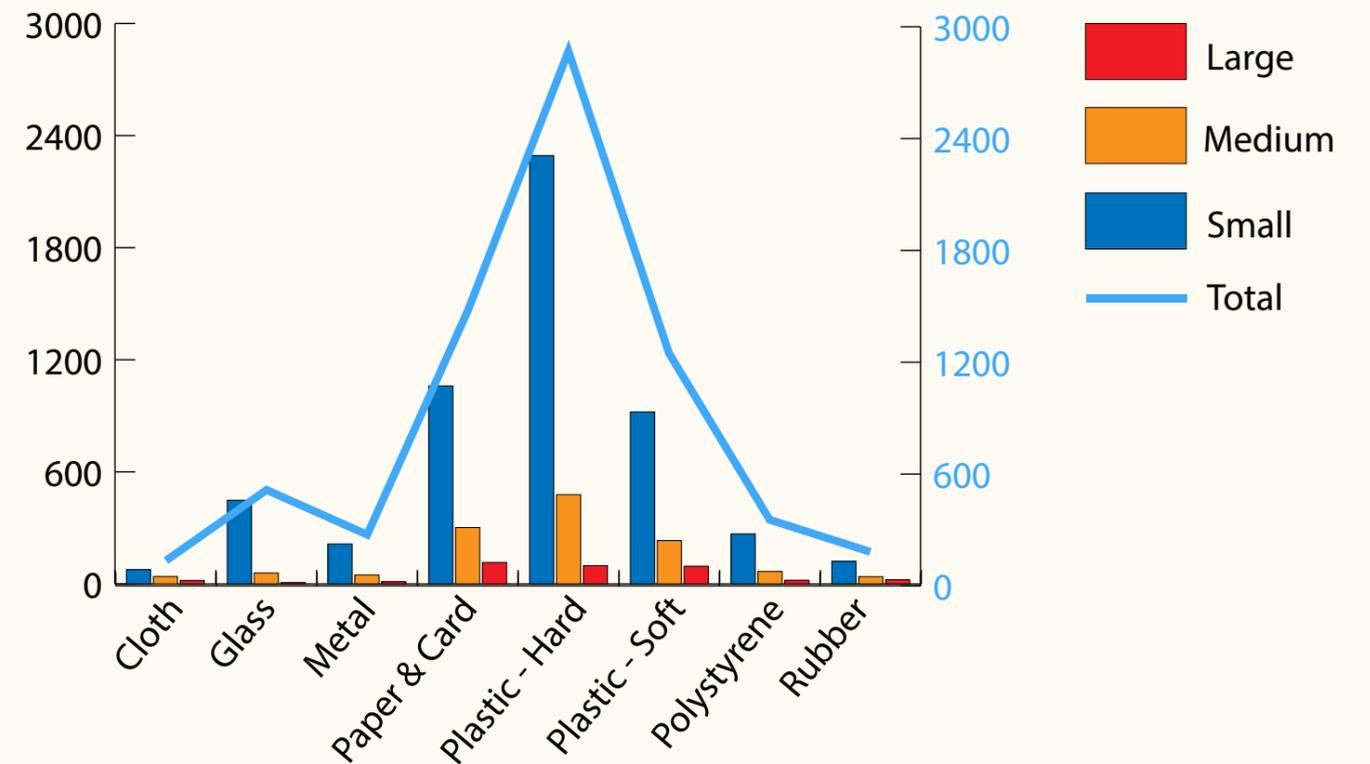

Fragments made up a significant portion of litter items counted, totalling 7,058 across all categories and sizes.

Across the material types, small fragments were consistently the most common size found. Hard Plastic was the most common material for small and medium fragments, and Paper and Card for large.

Soft Plastic fragments were third highest and were less than half the number and volume of Hard Plastic. This is possibly due to the flexible nature of soft plastic; this material is more likely to persist in the environment in its original form e.g., whole plastic bags, food/confectionary wrappers, whilst the more rigid nature of Hard Plastic means it is more likely to break into fragments, which remain in the environment in fragment form.

TOTAL FRAGMENTS					
Material	Small (#)	Medium (#)	Large (#)	Total (#)	Volume (l)
Cloth	77	40	19	136	1.86
Glass	448	59	8	515	4.78

Paper & Card	1,060	302	115	1,477	16.99
Plastic (Hard)	2,293	478	98	2,869	29.13
Plastic (Soft)	921	232	95	1,248	14.12
Polystyrene	268	67	20	355	11.57
Rubber	121	39	23	183	2.33
Total	5,402	1,265	391	7,058	89.47

FRAGMENTS: TOTAL AND SIZE BY TYPE

5. Other Observations

Items of Note – Facemasks

Over the period 2020 – 2022, the Coronavirus Pandemic has resulted in a number of Public Health Orders, including periods of Facemask mandates across the Perth Metropolitan Area.

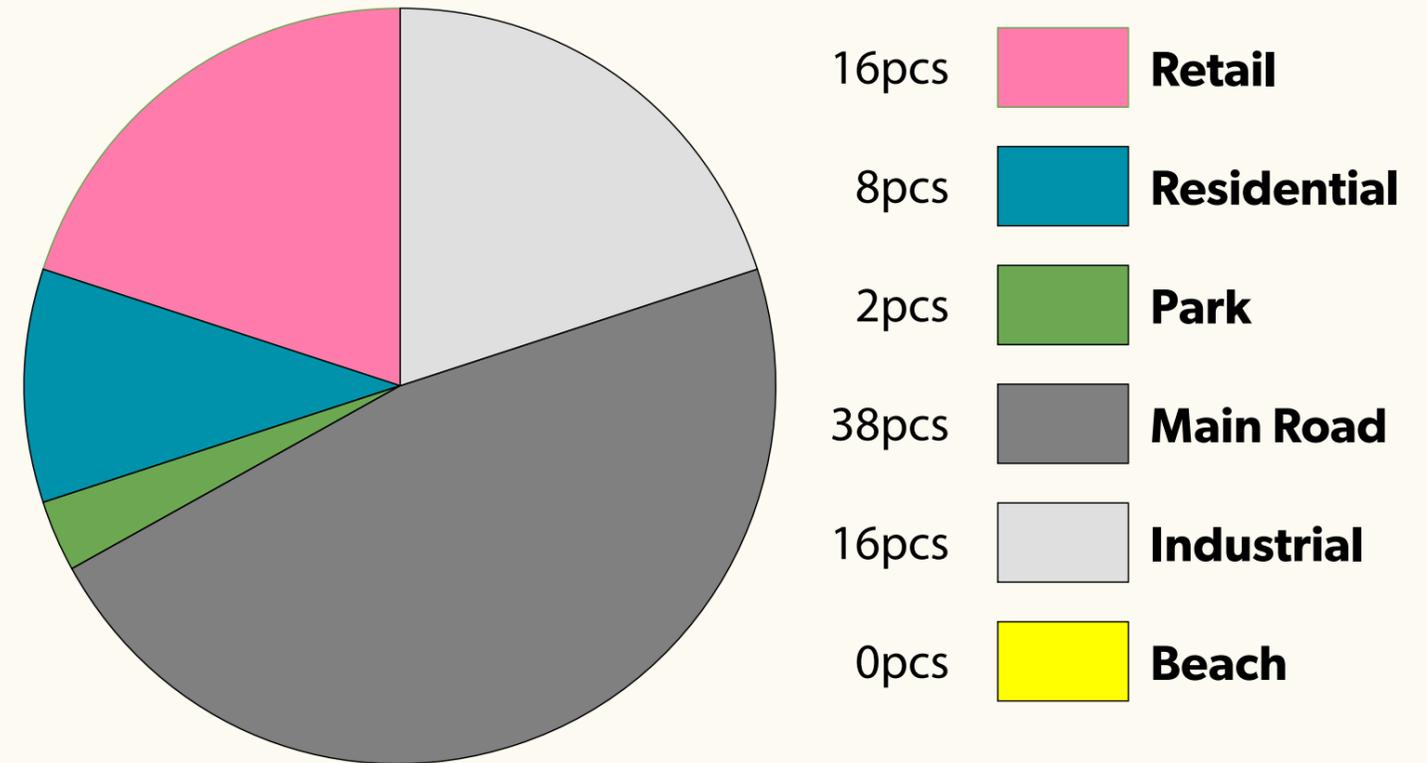

Facemasks made up a relatively small portion of the total litter counted, totalling just 0.44% of the total items, or 0.70% of the volume.

Nearly half (47%) of the facemasks counted were found in Main Road sites. There were no facemasks counted at beach sites.

Of the 80 masks counted, 72 were disposable, and the balance were fabric/reusable.

At the time of the Litter Surveys (May 2022) there were limited Facemasks mandates in place, with them required to be worn only in certain settings (public transport, airports, hospitals, residential aged care and disability service facilities, and correctional facilities.) This contrasts with four months prior, when Masks were mandatory in all Public indoor venues.

CONCENTRATION OF FACEMASKS BY SITE

KEY ITEM SNAPSHOT: FACE MASKS	
Total Number of Items - (#)	80
Total Volume of Items- (l)	8
Highest Site Litter Count – Number (#)	16
Highest Site Litter Count – Volume (l)	1.6
Lowest Site Litter Count – Number (#)	0
Lowest Site Litter Count – Volume (l)	0

Illegal Dumping

There were occasions where illegal dumping was observed during the litter surveys. In three instances, there was dumping noted within a specific transect, and accordingly, per the AusLM Field Manual, the items found were excluded from the count and the area containing the items plus a one metre buffer was excluded from the surveyed area.

The total volume of illegal dumping inside transect boundaries was estimated at two medium loads, and one small load. Items of this nature observed included mattresses, sheets, construction waste and clothing.

Adjacent to, but outside of transect boundaries there was additional instances of dumped clothing and footwear observed (these had no impact on reported figures but have been noted here for context).

Appendix 1

Site Type Assessment Checklist

RESIDENTIAL AREA

Summary	A street/collection of streets in a residential area. The street has homes, units, or apartments on both sides of the street.
Inclusion criteria	<input type="checkbox"/> Houses, multi-unit developments, apartments and townhouses on both sides of the street.
Exclusion criteria	<input type="checkbox"/> Streets maximum speed limits greater than 60 km/h. <input type="checkbox"/> Dead end/blind-ended streets (e.g. courts, cul-de-sac) <input type="checkbox"/> Streets with schools or other significant public amenity (though these can be nearby in neighbouring streets).

RETAIL AREA

Summary	A street/collection of streets within a retail precinct (i.e. shopfronts).
Inclusion criteria	<input type="checkbox"/> Majority of street contains retail shops and food stores. A small fraction of other building types (e.g. a library, a small office frontage) is allowed. The retail strip might be only on one side of the road or both. Buildings that have retail fronts/at ground level and residential above can be included.
Exclusion criteria	<input type="checkbox"/> A strip that is dominated by restaurants/pubs (i.e. more than 80% of the land use areas).

INDUSTRIAL AREA

Summary	A street/collection of streets in an industrial area.
Inclusion criteria	<input type="checkbox"/> Streets will include factories, industrial offices, warehouses, workshops or other industrial buildings.
Exclusion criteria	<input type="checkbox"/> Industrial areas that are accessed by a private road. e.g. Industrial parks where the listed address is the main road at the front of the estate. <input type="checkbox"/> More than 10% of the street length contains retail shops.

RECREATIONAL PARK

Summary	A public outdoor space frequently visited by individuals and families for recreation and leisure.
Inclusion criteria	<input type="checkbox"/> Has one or more of the following: a playground or covered eating area (e.g. a rotunda) or barbeque or similar substantial piece of infrastructure. <input type="checkbox"/> 50% or more open area (i.e. grass, paths) that is not playgrounds or dense vegetation.
Exclusion criteria	<input type="checkbox"/> Parks with food retail outlets (kiosks, takeaway stores etc.) within the site or within 50 m of the park boundary.

BEACH

Summary	A mostly sandy beach frequently visited by people for activities such as swimming, walking, other recreation and relaxation.
Inclusion criteria	<input type="checkbox"/> The majority (i.e. 90% or more) of the beach area to be sampled is sand (or sand covered in seaweed etc.).
Exclusion criteria	<input type="checkbox"/> Piers, jetties, wharves or boat ramps are within 100 metres of the location of the transects to be surveyed.

MAIN ROAD

Summary	Straight open stretches of sealed road with wide verges. Roads that typically act as an arterial for traffic between and around population centres.
Inclusion criteria	<input type="checkbox"/> A main road linking population centres (towns/cities) <input type="checkbox"/> Vegetation bordering each side of the road
Exclusion criteria	<input type="checkbox"/> Petrol stations, fast food outlets and service centres within 2 km of the site <input type="checkbox"/> Site has bridges, overpasses, rest stops, turn-offs, intersections (except driveways), and slipways <input type="checkbox"/> Areas with steeply sloped verges (i.e. >45°) are excluded.
