ELECTRIC VEHICLE (EV) CHARGING GRANTS CASE STUDY

Shire of Katanning

The Shire of Katanning is about 290km south-east of Perth in the Upper Great Southern. The Council wanted to install and operate its own EV chargers to give employees, residents, and visitors the confidence to transition to EVs. The Charge Up Grants provided the ideal low-cost opportunity.

The Council had already identified that its car park was the ideal site to install chargers for employees and other visitors, as it was in the centre of town and close to businesses and amenities.

The Council installed two 22kW AC chargers after working with Charge Up contractors to determine the site closest to the main switchboard, which would reduce their installation costs, and selecting the most cost-effective chargers within the remaining budget.

The Council promotes the chargers through its website and signage at the site. This signage is also used to encourage daytime charging to take advantage of the building's solar system. The Council hopes that the ability to charge during the day while working, visiting or running errands will encourage drivers to transition to EVs.
