

Ghost Fire Systems

COMPANY PROFILE

Defence & Law Enforcement tactical teams are continuously training, to increase their survivability and enhance their operational readiness.

Battlefield simulators such as blank firing cartridges are integral to tactical team training, however, are not always available and limited in quantities as one time use items.

To address this gap, Ghost Fire Systems is developing electronic battlefield simulators, enabling operators to train anytime, anywhere with unlimited cycles.

Our systems are designed by users for users, allowing operators to refine their combat behaviours and improve their operational readiness.

PRODUCT DETAILS

Ghost Fire System's electronic battlefield simulators replicate the visual and auditory effects weapon systems, to enhance tactical training.

Key features:

- Systems integrate with in-service equipment.
- Systems can be stored locally and can be used anytime.
- Systems have unlimited cycles allowing operators to train until training objectives are met.
- Systems don't expend any waste through a training area allowing them to be used anywhere.
- Systems have no chemical-based explosives, making them safer to use for early-stage training.
- Systems are rechargeable, ready for the next training activity.

KEY AFFILIATIONS

- Defence Trailblazer
- University of Adelaide
- University of New South Wales

DISCRIMINATORS

- Veteran owned & operated.
- 40 years combined experience within the Australian Army.
- Contemporary knowledge of in-service weapon systems and user integration.
- Systems manufactured within Australia.
